ASSIGNMENT STYLE SHEET

Please follow these guidelines to format all your ES5000 assignments before submission. See the example on the next page.

The Basics	▪ Leave at least a 1" (2.54 cm) margin on all sides of your A4 size paper (top, bottom, left and right). ▪ For documents with multiple pages, use page numbers.
Page Heading	▪ Put your name, ES5000 tutorial group number and the date on separate lines at the top left-hand corner. ▪ Use single line spacing for the heading.
Body Text	▪ Give each assignment a descriptive title, centred, on its own line. ▪ To distinguish separate paragraphs, skip a line between paragraphs. ▪ Use 1.5 line spacing. Align text to the left (not full justification). ▪ Use a 12-point font for body text. ▪ Count the words and put the word count after the final paragraph (e.g., W=400)
Quotations	▪ For short quotes (of no more than 40 words), use “quotation marks” to identify the quoted text. ▪ For long quotes (of 40 words or more), start the quotation on a separate line and indent every line of the quoted material 10 spaces (or two tabs).
Spacing and punctuation	▪ Put one space after commas, full stops, colons and semi-colons. Do not use spaces before punctuation marks. ▪ Put no space between the numeral and the percent sign or dollar sign (for example, 87%, $400, etc.). ▪ Put a comma but no space in large numbers to indicate thousands, millions, etc. (for example, 18,000,000).
Numbers	▪ Spell numbers less than ten. Use figures for numbers 10 and over. ▪ Spell out numbers that are the first word of a sentence. ▪ For numbers less than 1, precede the decimal point with a zero (for example, 0.36).
References and Declaration	▪ Cite sources in the text using APA citation style. ▪ At the end of the assignment (after the References) copy and paste the AI Declaration given in Canvas. ▪ Use single line spacing for the reference list and AI declaration.
File Names	▪ Name your assignment files with the “tutorial group number_your name_assignment”. ▪ Example: G10_Teo Wei Jie_p-s essay

Grammar Analysis of a Computer Visualization Text

In *Detecting and Reading Text in Natural Scenes*, Chen and Yuille (2004) described their study of a new algorithm designed to process the digitized information from a road-sign reading device. In their study, the authors often used comparison and contrast to present the efficiency and advantages of the algorithm. Two examples of adjectives in comparative degree are found in the conclusion. Firstly, "The performance we report in this **paper is better than** those reported in Lucas et al., but the datasets are different" (p. 273). Secondly, "Also there are important differences between text and face stimuli because the spatial variation per pixel of text images **is far greater than** for faces" (p. 273).

Furthermore, the authors also used adverbs in mid position. For instance, the following examples come from the discussion section:

> Such tests are **computationally** cheap to implement because they involved checking the value of f(I) only within a small range. These features are **more computationally** expensive than the previous tests. When applied to over 20,000,000 image windows, the total number of false positives was just over 118 and the number of false negatives was 27 (p. 271).

When writing academic articles, passive voice is often used in process descriptions. Chen and Yuille did so in their methods section. …

W=210

Declaration

I understand what plagiarism is, and I declare that I did not plagiarise any part of this assignment. I also acknowledge that I
☐ did not use any AI tools.

☒ used Claude and Grammarly for this assignment

- ☒ to brainstorm ideas.
- ☒ to suggest topics, reasons and supporting points for my arguments.
- ☐ to generate some sentences that I developed into the final version.
- ☐ to generate paragraphs that I organized into the final version.
- ☐ to generate a complete draft that I edited into the final version.
- ☒ to edit/improve a draft originally written entirely by me.
- ☐ to provide comments on a draft originally written entirely by me.
