00:00
Microsoft, that's fine.
微软，很好。

00:07
A login.
一个登录。

00:08
So you could be very confident.
所以你可以非常自信。

00:10
That's what most people have done.
大多数人都是这么做的。

00:14
All right, um.
好吧，嗯。

00:16
If you've loved it, and it still doesn't look press refresh, because it's just.
如果你喜欢它，但它还是不好看，请按刷新，因为它只是。

00:21
What happens to the refreshment? You're able to see your personal experience.
茶点怎么办？你可以看到你的个人经历。

00:24
Okay. All right. So if you have to keep trying, because you're going to start the workshop with Chris in many minutes, but in the meantime.
好吧。好吧。所以如果你必须继续努力，因为你将在几分钟后开始与克里斯的研讨会，但与此同时。

00:33
Let's go to some stuff, some thoughts and questions from last week.
让我们回顾一下上周的一些想法和问题。

00:40
If any question here, can we have a book to move beyond extractivism or publish or parish culture and then movement against it? Right rule. So we've been talking about some of the structural factors that.
如果这里有任何问题，我们能不能有一本书超越采掘主义或者出版教区文化然后运动反对它？正确的规则。所以我们一直在讨论一些结构性因素。

00:51
Affect general candidates in general here in the University analysis, yes, there are some kind of movements to sort of rethink how we do scholarship. One of that is public, open access complications, so making sure that we.
在大学的分析中对一般的候选人产生影响，是的，有一些运动在重新思考我们如何做奖学金。其中之一是公共，开放获取的复杂性，所以要确保我们。

01:06
The stuff that we do publish is actually accessible to the community that we work with, to the wider public. And that's what open excess is for.
我们发布的东西实际上是我们合作的社区，更广泛的公众可以访问的。这就是开放式超额的意义所在。

01:14
There's public history, which is is oriented towards communicating. Research is oriented towards making sure that the public are involved.
还有公共历史，它是面向交流的。研究的目的是确保公众的参与。

01:24
And they help sort of research with us, rather than doing research off people.
他们帮助我们进行研究，而不是在人身上做研究。

01:31
So community, based research initiatives are kind of the way we think about these kinds of.
所以基于社区的研究计划是我们思考这些问题的方式。

01:38
Doing research that's equitable, that really makes an impact up there. Another kind of way to think about it or another.
做公平的研究，才能真正产生影响。这是另一种思考方式。

01:49
For scholars are private initiatives, are private initiatives. Sometimes they have a bit more leeway just because they are not constrained by universities in that sense. So you could work for, say, the National Galleries of Private Institution.
对于学者来说都是私人首创，都是私人首创。有时他们有更多的回旋余地，因为他们不受大学的限制。比如说，你可以为国家私人美术馆工作。

02:03
Right? And their funding model is different, so they use money from somewhere else, so they're not necessarily constrained by today's sort of public spending, which tends to be shrinking when it comes to higher education.
对吧?他们的资助模式也不同，所以他们使用其他地方的资金，所以他们不一定受到今天的公共支出的限制，当涉及到高等教育时，公共支出往往会减少。

02:16
So that's one thing you could still do historical research work at least, and you can still really meaningful work, even in private institutions, even though that's not the first thing you necessarily think of, but it's worth exploring. Sometimes I've seen people move into that.
所以这是你至少还可以做历史研究的一件事，你仍然可以做真正有意义的工作，即使是在私人机构，即使这不是你首先想到的，但它值得探索。有时候，我看到人们陷入了那种境地。

02:30
It's not all hopeless. We were talking about some governmental levers last time. Right? One third of research in the UK, E.G., is based on research. Funding is based on impact.
这并非毫无希望。上次我们讨论了一些政府杠杆。对吧?例如，英国三分之一的研究是基于研究。资金是基于影响的。

02:43
Right? So there are some governments around the world that do sort of factor this in to the way that they think about how they fund universities, E.G.?
对吧?因此，世界上有一些政府在考虑如何资助大学时确实会考虑到这一点，比如?

02:53
But all of this really stems from a wider issue about sort of knowledge and education being seen as goods and products.
但所有这些都源于一个更广泛的问题，即知识和教育被视为商品和产品。

03:01
Rather than sort of process or experience, we're kind of swimming against the tide in terms of the computation of higher education.
与其说是过程或经验，不如说是在高等教育的计算上逆水行舟。

03:12
Education in general, thinking about, sort of students and university students as customers and universities and service providers. And the way that we think about that, the way that we think about knowledge and the way we think about education.
一般的教育，把学生和大学生看作是顾客，大学和服务提供者。我们思考这个问题的方式，我们思考知识的方式和我们思考教育的方式。

03:26
Seeps into sort of these discussions about how scholars do their work and

what research is considered meaningful, what education is considered meaningful. These are big lab structural factors they have to do with.
渗入到这些关于学者如何做他们的工作，什么研究被认为是有意义的，什么教育被认为是有意义的讨论中。这些都是他们必须处理的大型实验室结构因素。

03:37
A crisis in modernity and all sorts of other things. So, you know, I don't think we can solve them necessarily, but this is kind of the root of it.
现代性危机和其他各种各样的事情。所以，你知道，我认为我们不一定能解决它们，但这是问题的根源。

03:46
Things might change. Who knows, but it's a big issue.
事情可能会改变。谁知道呢，但这是个大问题。

03:52
Okay.
好吧。

03:56
Question, a practical question here, about compensating research subjects and communities meaningfully. So nowadays, especially for, say, indigenous studies, we definitely offer at least an honorary room. So.
一个实际的问题，关于有意义地补偿研究对象和社区。所以现在，特别是对于土著研究，我们至少会提供一个荣誉房间。所以。

04:07
Some recompense for people's time. So you spend an hour and you invite them to speak at a seminar, you want to recompense them for their travel, for their expertise.
对人们的时间的一些补偿。所以你花了一个小时邀请他们在研讨会上演讲，你想奖励他们的旅行，他们的专业知识。

04:16

So money. If you are doing a funding application, right, and you're inviting research co collaborators from community, then you ought to sort of price that it.
所以钱。如果你在做一个基金申请，对吧，你在邀请来自社区的研究合作者，那么你应该给它标价。

04:26
As part of your funding, okay. And if you don't ask, right, what actually is most meaningful to them? Sometimes.
作为你资金的一部分。如果你不问，对他们来说什么才是最有意义的？有时。

04:34
So for my work, E.G., we think about buying tobacco because tobacco is an important ceremonial gift, right?
举个例子，在我的工作中，我们会考虑买烟草，因为烟草是一种重要的仪式礼物，对吧?

04:43
It's a which runs into some issues sometimes because Customs and tobacco, tobacco is taxed, right? And you can't really sort of send them across borders without the.
这有时会遇到一些问题因为海关和烟草，烟草是要征税的，对吧？你不能把它们送出国境，除非。

04:53
But things like that, right, are meaningful to community, to specific community. So you kind of need to know when asked.
但是像这样的事情，对社区，对特定的社区是有意义的。所以当被问到的时候，你需要知道。

05:02
Ask, if you don't not just ask, right? What is meaningful? What would you find valuable? Sometimes you won't ask for money necessarily, but they might ask for, you know, advice. They might ask you to spend some time

working on something.
问，如果你不直接问，对吧？什么是有意义的？你认为什么是有价值的？有时你不一定要钱，但他们可能会问，你知道，建议。他们可能会让你花点时间做点什么。

05:14
That meeting is not related to your work necessarily, but it's all about building the interpersonal bonds that are really important to build a report, right?
这个会议不一定与你的工作有关，但它是关于建立人际关系的，这对撰写报告非常重要，对吗？

05:23
Okay. So if you don't know, ask, get to know them well. Ask them what actually would help with whatever issues they might be working with.
好吧。所以如果你不知道，那就去问，好好了解他们。问他们到底什么能帮助他们解决正在处理的问题。

05:35
How can digital historians balance useful, open access with ethical responsibility to protect communities that represented in the data? It's a good question, right? How do we?
数字历史学家如何平衡有用的、开放的访问与保护数据中所代表的社区的道德责任？这是个好问题，对吧？我们该怎么做？

05:47
This comes from the vocabulary comments reading, I think.
我认为这来自于词汇评论阅读。

05:52
And answer really is, does the data need to be published? So we talk a lot about replicator that. We talk about access to data, right? But remember that there are different levels of access to data. You can have embargoes, e.g., right?
答案是，这些数据需要公布吗？关于复制因子我们讲了很多。我们谈论数据

访问，对吧？但请记住，对数据的访问有不同的级别。你可以有禁运，对吧？

06:06
To put an article for ten years before it becomes open to the public. So and so forth. Right? So these options do exist. Sometimes the answer is actually not to publish It.
把一篇文章放上十年才对公众开放。诸如此类。对吧?所以这些选择是存在的。有时候答案其实是不发表。

06:18
Whether it's the work or whether it's the data set. So ideally, you figured it's all closer to the beginning of the process, rather than towards the end. This is why working with community to design this in the first place is a good idea, so you don't sort of reach the end and realize that, you know what, actually, if I put this On.
不管是工作还是数据集。所以理想情况下，你会发现它更接近过程的开始，而不是接近过程的结束。这就是为什么一开始就和社区一起设计这个是一个好主意，所以你不会到最后才意识到，你知道吗，实际上，如果我把这个戴上。

06:33
That it will have real repercussions, right? So there are some research projects that you might really want to do, but you will realize that maybe it's not.
它会产生真正的影响，对吧？所以有一些研究项目你可能真的很想做，但你会意识到它可能不是。

06:42
The asking to do okay. And so knowing what might work and what would be good to put out there is kind of key to figure out the version.
请求做得好。所以知道什么是可行的，什么是好的，是找出版本的关键。

06:50
People in community. They don't owe us their stories or their knowledge or

their experiences, especially people who are alive. That's something just to know.
社区里的人。他们不欠我们他们的故事，他们的知识或他们的经历，尤其是那些活着的人。这是需要知道的。

07:01
You don't, there's nothing about research that's eminently purer than any other enterprise, necessarily, right?
你不知道，研究并不一定比其他企业更纯粹，对吧?

07:09
Is tied into a lot of other things as well. So.
也和很多其他的事情联系在一起。所以。

07:13
I mean, we are scholars, so we want to know. We want to do research, right? But that's not everybody's obsession.
我是说，我们是学者，所以我们想知道。我们想做研究，对吧？但并不是每个人都痴迷于此。

07:23
So it's good to see that perspective. That's good.
所以很高兴看到这个观点。这很好。

07:29
Right?
对吧?

07:29
This was a very interesting question, right? Thus working or partnering with polarizing groups like NTLGPT or neo Nazi groups, does it not help community understand why they think that way?
这是个很有趣的问题，对吧？因此，与NTLGPT或新纳粹组织这样的极端组织合作或合作，难道不能帮助社区理解他们为什么会那样想吗?

07:41
And it's a good question, right? Like, what do you work with group staff?
这是个好问题，对吧？比如，你和团队工作人员一起做什么？

07:46
Very obnoxious.
非常讨厌的。

07:49
I'll just say you have to be very careful. If you do choose to work on topics and groups like that, you have to have the cognism about their motives and why they're participating in your research, right? Why they are even engaging?
我只能说你一定要非常小心。如果你选择研究这样的主题和群体，你必须知道他们的动机以及他们为什么参与你的研究，对吧？为什么他们会参与其中？

08:05
Because engaging with you is not cost free, right? They are spending a time working with you for something. So what is it that they intend? What are their goals, right? Sometimes?
因为和你交流不是免费的，对吧？他们会花时间和你一起工作。那么他们的意图是什么呢？他们的目标是什么？有时吗？

08:14
Groups see working with scholars as a way to legitimize what they're doing. So you kind of need to get a sense of, okay, So what is it that they are looking For.
团体将与学者合作视为使他们所做的事情合法化的一种方式。所以你需要有一种感觉，好的，那么他们在寻找什么。

08:25
Or right? Is your work going to do that maximization? Well, even if you know in the details of it, you're not right. You're problematic. A lot of things are going on, but what is the?

或对吧?你的工作能达到最大化吗？即使你知道细节，你也不对。你是有问题的。很多事情都在发生，但什么是?

08:34
What are people to see from that? Right? So you need to keep that in mind, right?
人们能从中看到什么？对吧?所以你需要记住这一点，对吧?

08:41
What does your publish work actually?
你的出版工作是什么?

08:44
And it's not that it's not that people don't work on these, lots of people work on these, right? There are lot of scholars who look at, sort of like far, right, off right movements. They look at the mental sphere, people like educate, E.G., right journalists and social scientists. Students work all the time.
并不是人们不研究这些，很多人都在研究这些，对吧？有很多学者都在研究，极右，偏右的运动。他们关注的是精神领域，像受过教育的人，比如右翼记者和社会科学家。学生们一直在学习。

08:58
All right. What I want to caution you as human is is that you don't usually do this, so we don't usually teach you how to take care of yourselves, but just just tell you that there are resources out there.
好吧。作为人类，我想提醒你们的是，你们通常不会这样做，所以我们通常不会教你如何照顾自己，但只是告诉你们，那里有资源。

09:09
That you can look for. Look for journalism schools. Look for social scientists. These are people who have experience working with groups that can be quite nasty.
你可以去找。寻找新闻学院。寻找社会科学家。这些人都有过与非常恶劣的群体共事的经验。

09:20
In terms of their ideas and what they're doing, you do need to take care of yourself. Something off the top of my head is E.G., people working on Holocaust days.
就他们的想法和他们正在做的事情而言，你确实需要照顾好自己。我突然想到的是，例如，人们在大屠杀纪念日工作。

09:29
Right? People working in a channel site, right? Currently, channel sites, there are real mental health repercussions, including the work that you do and looking at the stuff that you do.
对吧?在频道网站工作的人，对吧？目前，频道网站确实会对心理健康产生影响，包括你所做的工作和你所做的事情。

09:39
And so there's, there are resources out there that's specifically focused on researchers, so working on this material. So it is out there. Please avail yourself to them.
所以，有一些资源是专门针对研究人员的，研究这些材料。所以它就在那里。请利用它们。

09:49
That's your first job. Okay.
这是你的第一份工作。好吧。

09:51
The thing that's really complicated is that you're working with people, and people are very different from just specimens in the library company. Just see them.
真正复杂的是，你要和人一起工作，而人与图书馆公司的标本是非常不同的。看看他们。

10:01
And, you know, observe them. Humans are because they have motivations.

They are very reflexive. So the more you interact with them, the more is sort of.
然后，你知道，观察他们。人类是有动机的。他们有很强的自反性。所以你和他们接触得越多，就越有点。

10:11
Leads into a particular dynamics. We just make sure you have some perspective.
导致了一种特殊的动态。我们只是想让你对未来有所了解。

10:15
Terms of this, especially when you're working with groups.
尤其是当你和团队一起工作的时候。

10:22
Like.
喜欢。

10:22
The sort of answer necessary.
这种回答是必要的。

10:25
This one is related to the trading zones thing that we're talking about. Can we replace collaboration with computer scientists with AI such as CODEX or NLP?
这个和我们正在讨论的贸易区域有关。我们能否用人工智能（如CODEX或NLP）取代与计算机科学家的合作?

10:37
Or natural language profiting, or right coding, you kind of, but maybe not. The problem is, for research, work tends to be quite specific.
或者自然语言的好处，或者正确的编码，你有点，但也许不是。问题是，对于研究，工作往往是非常具体的。

10:47
It tends to be quite bespoke, right? It needs to do a specific thing at a specific time with specific types of evidence. And so that actually kind of requires you to.
它往往是定制的，对吧？它需要在特定的时间用特定的证据做特定的事情。这就要求你。

10:59
Understand how the coding actually works. So even if it comes to things like text analysis for them, you kind of need to know what the code is doing.
理解代码是如何工作的。即使涉及到文本分析，你也需要知道代码在做什么。

11:09
The problem we write coding is that it mostly works, and it's on them to break, and you're not quite sure why. And partly it's because, as humans, you don't necessarily learn how to audit the code, or you don't have the principles of.
我们写代码的问题是，大多数情况下，它是有效的，它是在他们的问题上，你不太确定为什么。部分原因是，作为人类，你没有必要学习如何审核代码，或者你没有原则。

11:21
Computer science.
计算机科学。

11:24
With someone who knows.
和一个知道的人。

11:26
Hard works.
艰难的工作。

11:27
So working with computer scientists from the beginning, right? Thinking about sort of aspirations of the research work and letting them, in some ways, sort of.
所以从一开始就和计算机科学家一起工作，对吧？想想研究工作的志向让他们，在某种程度上。

11:38
Design it with you, right? In an equitable manner. That's kind of maybe the best way to do it, right?
和你一起设计，对吧？以公平的方式。这可能是最好的方法，对吧？

11:45
That's not to say that AI, by coding tools are sort of dead end for you. You can still use them to explore things in the first place, to.
这并不是说人工智能，通过编码工具对你来说是死胡同。你仍然可以在一开始就用它们来探索事物。

11:57
Figure out what's possible, what's not possible before you launch into a long term project. Okay.
在你开始一个长期项目之前，弄清楚什么是可能的，什么是不可能的。好吧。

12:02
Okay. All right. So those are the queries from last week. This week, what we're going to do is we're going to talk a little bit more about tax corpuses, where you.
好吧。好吧。这些是上周的查询。这周，我们要做的是我们要更多地讨论一下税收强制令，你们。

12:13
Done some of the readings. And before we launch into the workshop with Chris from Gale, I just want to run through some of the points that does come up.

做了一些阅读。在我们和来自Gale的Chris一起开始研讨会之前，我想先回顾一下会出现的一些观点。

12:23
As we were sort of looking through the readings for considerations around working with text offices, right? How they are made and how they are.
就像我们在阅读文本办公室的时候所考虑的那样？它们是怎样制造的，又是怎样的。

12:32
Explore, or cr, right, which is a very big part about sort of turning images into tax right? You will explore this. Chris will explain to you exactly, how do you do It.
探索，或者cr，对吧，这是将图像转化为税收的重要部分，对吧？您将对此进行探索。克里斯会向你详细解释，怎么做。

12:43
So I won't spend too much time talking about that, right? But it's quite important for you to figure out how these businesses work. The scale of the law is a private Business.
我不会花太多时间讲这个，对吧？但是弄清楚这些业务是如何运作的对你来说很重要。规模的法律是私营企业。

12:51
Right? The AI, the work of scholarship and research work and all that. But they're still very much They have to essentially turn a profit, or at least not lose money.
对吧?人工智能，学术研究工作等等。但他们仍然需要盈利，或者至少不亏钱。

13:01
Right. So, you know, chris is great. Please press him, right. Ask him, like, how do these things intersect? Because he is a working professional.
正确的。所以，你知道，克里斯很棒。请按一下他，好吗？问他，这些东西是怎么相交的？因为他是一个专业工作者。

13:10
In the company. You know, even though he loves doing the research in the history work, he's very much he has a different perspective.
在公司里。你知道，尽管他喜欢做历史方面的研究，他非常他有不同的观点。

13:19
Of the process, then we do as scholars. So please ask him stuff right. Get to know his perspective.
这个过程，那么我们就做学者。所以请问他正确的问题。了解他的观点。

13:26
And then with that, we will do some experiments with the lab. You'll guide you through, kind of walking through some of the text analysis methods that topic model.
然后，我们会在实验室里做一些实验。你们会引导你们，通过一些文本分析方法来了解主题模型。

13:36
Okay.
好吧。

13:37
So I had a couple of focus questions, and essentially is asking you about the tool. How would you use text analysis for historical research?
所以我有几个重点问题，本质上是问你关于工具的问题。你如何在历史研究中使用文本分析?

13:46
I've read what you guys were writing in response, and thinking about how and where this part of expertise and knowledge is used in the analysis.
我读了你们写的回应，并思考如何以及在哪里使用这部分专业知识和知识来进行分析。

13:54
And you probably all concluded that it is actually going to be all right.
你们可能都得出结论，一切都会好起来的。

14:00
Quickly ask around How many of you managed to read this text?
快速问问周围有多少人读懂了这篇文章?

14:05
This is the, this is the second one. This is Come to Plot poster. Okay, so some of you manage to see it, right?
这是，这是第二个。这是来密谋的海报。好吧，你们中有些人看到了，对吧?

14:16
Some of you probably didn't, because this website tends to have an issue.
有些人可能没有，因为这个网站有个问题。

14:21
Right? And some of you probably got ever goods. Okay.
对吧?你们中的一些人可能得到了货物。好吧。

14:27
Okay, real problem.
好吧，真正的问题。

14:28
Right? Even just accessing stuff that's online, right?
对吧?甚至只是访问网上的东西，对吧?

14:34
Link, rot is the real thing.
林克，这是真的。

14:36

This is how I would solve it. Use the web market. Look for an archive version of the website.
这就是我的解法。利用网络市场。寻找网站的存档版本。

14:43
This will probably become very intuitive for you, right? If, at some point, if you if the original link doesn't work.
这对你们来说可能很直观，对吧？如果，在某个点，如果你如果原始链接不起作用。

14:53
Right go to the Web archive and see whether they've actually managed to save the Web page for us. Very, very useful tool.
去网页存档看看他们是否真的为我们保存了网页。非常非常有用的工具。

15:00
For historians. And all one of you are working with, I think you're working with Internet Archive, looking at the earliest web pages of Soviet Asia, which is a very cool project.
历史学家。你们所有人都在，我想你们都在和互联网档案馆一起工作，看苏联亚洲最早的网页，这是一个非常酷的项目。

15:10
Okay.
好吧。

15:12
This is from the Goldie, please, right? Goldie argues that Silicon Valley and computer scientists do need a bit of few minutes training.
这是戈尔迪的，对吧？戈尔迪认为，硅谷和计算机科学家确实需要几分钟的培训。

15:27
Right? They need a sense of attention to the context, because it's very possible to use tools to create a convincing conclusion.

对吧?他们需要注意情境，因为很有可能使用工具来得出令人信服的结论。

15:34
Um, but to misuse them because you are not paying attention to the context.
而是滥用它们，因为你没有注意到上下文。

15:41
As a real danger. You read about the workout, E.G., that's a very good illustration.
真正的危险。你读到关于锻炼的文章，例如，这是一个很好的例子。

15:49
Of how pulling out things without looking at original context can be really misleading.
如果不考虑原始背景就把东西拿出来会很误导人。

15:55
Can anyone point out what two sounds a bit like that?
有人能指出哪两个听起来有点像吗?

16:00
What strip things of context?
是什么让事情脱离了背景?

16:03
Represents it back to you.
代表它返回给你。

16:08
No.
否。

16:15
Work club, work club, but not just work club, but what else?

工作俱乐部，工作俱乐部，但不仅仅是工作俱乐部，还有什么?

16:22
What else kind of who's out the context from the original?
还有什么人脱离了原著的背景?

16:29
Lances. That's what I kind of generalize this. It matches, happens, right? It's pulling out.
长矛。这就是我的概括。它是匹配的，对吧？它在往外拉。

16:45
Millions and billions of examples of text, right? It's trying to figure out the context, but ultimately it will sort of revert to.
数以百万计的文本样本，对吧？它试图找出上下文，但最终它会回到。

16:54
A sense of what is most common.
对什么是最常见的感觉。

16:56
And so AI is actually texting a little bit large. It is essentially a text this place called large language model.
所以人工智能实际上是在发短信。它本质上是一个文本这个地方称之为大型语言模型。

17:05
Using language. Language as a base for prediction, predicting what your next word is.
使用的语言。语言是预测的基础，预测下一个单词是什么。

17:14
What is most relevant to you.
什么是与你最相关的。

17:15
So LMS are kind of the link.
LMS是一种连接。

17:20
Generation in some way, so on, offshoot of text analytics.
以某种方式生成，比如文本分析的分支。

17:24
So even though text analytic is a very old view historically speaking, now, especially in British humanities, it still has sort of new versions and new intuition.
所以即使文本分析在历史上是一个非常古老的观点，现在，特别是在英国人文学科，它仍然有一些新的版本和新的直觉。

17:34
AI, gen AI being one of them.
AI， gen AI就是其中之一。

17:38
Something that I see you guys are really tweaking on to right when it comes to the readings, is that you really do need to understand the corpus itself.
我看到你们在阅读材料方面做得很好，你们确实需要理解语料库本身。

17:53
Right? How is the corpus structured? What is extracted? What is left behind? Right?
对吧?语料库是如何构建的？提取了什么？留下了什么？对吧?

17:58
How is this data set mean?
这个数据集的均值是多少?

18:00

Because that context is so key for you to figure out how you're going to use it.
因为上下文对你如何使用它非常关键。

18:06
You don't know how. If you don't know what was done to the original text, you don't quite know actually how to maneuver around it.
你不知道怎么做。如果你不知道对原文做了什么，你就不知道如何修改它。

18:14
You don't know what kind of conclusions you can actually make from the data.
你不知道你能从数据中得出什么样的结论。

18:18
Okay. Did they take out the context? What kind of context did you remove? Because digitization is a choice, is a curatorial choice, right? I've decided to remove, in this case, the materiality of the sources.
好吧。他们去掉语境了吗？你删除了什么样的背景？因为数字化是一种选择，是策展人的选择，对吧？我决定删除，在这种情况下，来源的重要性。

18:31
I've decided to remove, in some cases, the color right of text all about. If the text was written in color, that some text was written and some text was flat as that change.
在某些情况下，我决定取消文本的颜色权。如果文字是彩色的，那么有些文字是彩色的，有些文字是平面的。

18:41
The way that I interpret the source, right? It's just an open material example.
我解释资料的方式，对吧？这只是一个开放材料的例子。

18:48
But what's attracted and kept into the data set and what's left.

但是被吸引和保存在数据集中的是什么，剩下的是什么。

18:54
Right?
对吧?

19:00
Yes, sir.
是的,先生。

19:00
Words and phrases, of course, like break, right, single point to single dash, four, singer on one line and a four.
单词和短语，当然，像break，对，单点到单破折号，四，歌手在一行和一个四。

19:12
And then explained, right? How do you reconcile that?
然后解释，对吧？你如何调和这两者?

19:15
Does it turn up when you sit?
当你坐着的时候它会变响吗?

19:19
We'll see. Okay.
我们将会看到。好吧。

19:19
We'll see our issues, which you can press. You can ask Chris a lot, because he will tell you a little bit of also. but the data, all right, which just not necessarily perfect, means a lot of training.
我们会看我们的问题，你可以按。你可以多问克里斯，因为他也会告诉你一些。但是数据，好吧，不一定是完美的，意味着大量的训练。

19:33
It's a lot of sort of going through. But then you've seen that newspapers has G E.G., automated with CR, sometimes.
要经历很多事情。但你也看到，报纸上有时会有自动的geg和CR。

19:40
A class of using from calling to identify how to do it.
一个使用从调用来确定如何做的类。

19:48
A quick look at the context.
快速浏览一下上下文。

19:52
Here's something I've put up from one of your responses for this week. Ensure are we searching for phrases that cannot or will not be excavated from the Sea of the past.
这是我从你们本周的回复中摘录的一些东西。确保我们正在寻找不能或不会从过去的海洋中挖掘出来的短语。

20:09
Right, but are you using the right keywords?
没错，但你是否使用了正确的关键词?

20:12
Right? Are you searching for the right term? This is a term that your sources will contain, right? Or are you using it an echronistic term?
对吧?你在搜索正确的词吗？这是你们的资料中会包含的一个术语，对吧？还是你用的是一个年代术语?

20:23
Because if you are, you'll never find anything, right? Same thing for spellings, variance, spellings, right?
因为如果是的话，你就什么都找不到了，对吧？拼写，方差，拼写也是一样，对吧?

20:31
If people didn't use to spell it, that half flow away, then you will never find you'll find keywort search zero, because.
如果人们没有用它来拼，那一半就流走了，那么你永远也找不到你会发现关键词搜索为零，因为。

20:39
It's not there. It's not there. It's that you are looking for the wrong things or the wrong specific.
它不在那里。它不在那里。而是你在寻找错误的东西或错误的具体内容。

20:43
So actually doing a little bit close reading, understanding.
所以仔细阅读一下，理解一下。

20:49
Okay, how are we doing very good. Any questions with I know I, I haven't got a lot of talk because we've got a workshop.
好吧，我们做得很好。有什么问题吗，我知道，我没有太多的时间，因为我们有一个研讨会。

21:00
But any questions or pauses before we go on.
在我们继续之前有任何问题或停顿吗。

21:04
Um.
嗯。

21:09
What happens when you have different data sources?
当您有不同的数据源时会发生什么？

21:13

Is the growing levels of complexity.
就是不断增长的复杂性。

21:15
This stuff. This is the milk example, right? You're trying to look across different data sets in different corpuses on the same topic.
这些东西。这是牛奶的例子，对吧？你试图在不同语料库中查看同一主题的不同数据集。

21:24
But they have different levels of digitalization. They have different standards of scanning and dpis, right? OCR is applied.
但它们的数字化程度不同。他们有不同的扫描和dpi标准，对吧？应用OCR。

21:35
Differently across the three offices, if at all right. The simple answer is, how much do you need to get your project back?
三个办公室的情况不同，如果有的话。简单的答案是，你需要多少钱才能收回你的项目？

21:44
All right, what is the bare minimum that you need so that you can do the analysis you want to do?
好了，你需要的最小值是多少才能做你想做的分析？

21:50
That's usually what happens. You can't get them all to a goal standard. This is you don't have the time. You have the money.
通常都是这样。你不可能让它们都达到一个目标标准。这是你没时间了。你有钱。

21:58
And so we use, in some views, we use this for the most of our method.
在一些视图中，我们在大部分方法中使用这个。

22:07
Right? What must you have for the project to succeed? What should you have, which is kind of the idea you ought to have this.
对吧?要想项目成功，你必须具备什么条件？你应该有什么，你应该有这个想法。

22:16
Right? What could you have? Like, okay, this is like, kind of, the extra stuff that would be really nice. But, you know, first to go right if we don't have the time, if we don't get budget.
对吧?你能吃什么？就像，好吧，这是一种，额外的东西，真的很好。但是，你知道，如果我们没有时间，如果我们没有预算，首先要向右走。

22:27
And then what's the one have? It's like a start. You attacking when it you're not even.
然后是什么呢？这就像一个开始。你在不平衡的情况下攻击我。

22:32
I'm going to consider it. We've considered it now. We don't think it's possible, not important. We're going to put it under Manhattan.
我会考虑的。我们已经考虑过了。我们认为这是不可能的，这不重要。我们要把它放在曼哈顿下面。

22:39
Okay.
好吧。

22:39
What this does really is just for you to rank, what are some of the fundamental items that you need?
它所做的只是给你排序，你需要的一些基本项目是什么?

22:46
Or the project to succeed. If you don't have the fundamental mass, the

project cannot succeed, you will not be able to look, find any conclusions that you want to.
或者项目成功。如果你没有基本的质量，这个项目就无法成功，你将无法看到，找到任何你想要的结论。

22:55
To find applies to the same for platforms or visualizations, e.g., what must you have in a visualization for it to make sense?
To find同样适用于平台或可视化，例如，可视化中必须有什么才能让它有意义?

23:04
Right, um. And then.
对,嗯。然后。

23:09
And the shirt, so it goes down in some importance. So the fundamental then the stuff that the good output should have.
还有衬衫，所以它显得很重要。好的产出应该具备的基本要素。

23:19
Then the codes are additional, kind of stretch goals, and then the other schools.
然后代码是额外的，有点延伸目标，然后是其他学校。

23:25
So think about applying it to your own project, right? I read all your sort of descriptions about what you can do and what you can explore. All them are good, great ideas, right, but.
所以考虑把它应用到你自己的项目中，对吧？我读了所有关于你能做什么和你能探索什么的描述。他们都是好主意，对吧，但是。

23:40
Think about what you need to deliver that project at the end of the specimen. What do you need to paradise? Right? Usually the scoping

issue, everyone's always a bit ambitious about I wonder this is.
想想你需要在样本的最后交付什么。你需要什么才能进入天堂？对吧?通常在范围问题上，每个人都有点雄心勃勃，我想知道这是什么。

23:51
Right? But now you can understand and think, what is the bad minimum and need for this religious system? That's the M and.
对吧?但现在你可以理解并思考，这个宗教体系的最低限度和需求是什么？这就是M和。

24:00
Stop. Okay.
停止。好吧。

24:05
All right.
好吧。

24:05
Ah, this is where I tell you about documentation. I remember I said, data sets are about understanding how they were created, right? You need to figure out how data sets.
啊，这就是我告诉你关于文档的地方。我记得我说过，数据集是关于理解它们是如何产生的，对吧？你需要弄清楚数据集是如何。

24:17
Create it so that you understand how to use it.
创建它，以便您了解如何使用它。

24:19
When you create your own project, you also need to make a racket of your own documentation.
当您创建自己的项目时，您还需要制作自己的文档。

24:25

Chris will tell you about this again, right? Keep a record of all the decisions to me. I looked at these five sets of sources. I will only use these four.
克里斯会再跟你说一遍的，对吧？把你所有的决定都记录下来。我看了这五组资料。我只使用这四个。

24:38
I take the fifth one out Because of whatever reason, I assure you, in one week time, two weeks time, you're going to forget.
我把第五张拿出来不管出于什么原因，我向你保证，一两个星期后，你就会忘记的。

24:46
So you're going to forget why you made this choice. You're going to forget why you decided to capitalize something and not start with something right. And data sets, we'll come back.
所以你会忘记你为什么做这个选择。你会忘记为什么要大写而不是用正确的开头。数据集，我们会回来的。

24:56
If you want data sets to be useful and to be used over and over again, you will need documentation, because if no one understands how it was made or why it was made in a particular way, why it was curated and popularly no one's been.
如果你想让数据集有用并被反复使用，你就需要文档，因为如果没有人知道它是如何产生的，或者为什么它以一种特定的方式产生，为什么它被策划，而没有人被广泛使用。

25:07
Use it? Because how do they know what is reliable and usable for their own purposes, right? Have you silently corrected all the variance spellings? What if this other scholar was interested in the variance spellings.
使用它呢?因为他们怎么知道什么是可靠的，什么是对他们自己有用的，对吧？你有没有默默地改正所有不同的拼写？如果另一位学者对不同的拼写感兴趣。

25:19
So curatorial choice that you've made that might not have any impact on your research. Other scholars might actually need to know, because it's crucial to death.
所以你所做的策展选择可能对你的研究没有任何影响。其他学者可能真的需要知道，因为它对死亡至关重要。

25:31
So simple stuff that you decide write it down. Documented.
如此简单的东西，你决定把它写下来。记录。

25:39
Okay.
好吧。

25:40
This is why I asked you to see the written text, or the Black British Lives Data set, because they tell you all the things.
这就是为什么我让你们看书面文本，或者黑人英国生活数据集，因为他们告诉你所有的事情。

25:50
Right? They tell you what the purpose was, even if they're not, even if they're stopped that they forget to put in. If you read their purpose, you read what they were trying to do.
对吧?他们告诉你目的是什么，即使他们没有，即使他们停止了，他们忘记了。如果你读了他们的目的，你就会明白他们想要做什么。

26:00
You can count. Guess what they have thought about that, right? Is it probable that they will have made this change based on what they set up to do?
你会数数。猜猜他们是怎么想的？他们是否有可能根据自己的设定做出这样的改变?

26:10
That's what you should do. No further, right? What is it that you set out to do with this data set? Right? What kind of editorial choices did you make?
这是你应该做的。没有了，对吧？你打算用这些数据集做什么？对吧?你做了什么样的编辑选择?

26:20
Right? And how does it appear in the data section, or what's missing? And then what did you pick up?
对吧?它如何出现在数据部分，或者缺少什么？然后你捡到了什么?

26:26
All right. Pretty good. Yes. How recent is this whole idea of documentation? Is it like past Ten years? Ten years?
好吧。很好。是。文档的概念是什么时候出现的？像过去的十年吗？十年?

26:38
I'm pretty sure things in the 1900s, no one thought about it.
我很确定在20世纪的时候，没有人想到过这个问题。

26:43
For digital projects. I mean, let's say, for digital or even like, when, you know, older folks use data in the meat type.
用于数字项目。我的意思是，比方说，对于数字，甚至像，你知道，老年人使用肉类类型的数据。

26:55
1945, one or something, if they use the time the car. And I guess no one we have done documenting. So the.
1945年的某一天，如果他们利用汽车的时间。我想我们没有人做过记录。所以。

27:04
Oh, sorry. Let me pop you over.
哦,对不起。让我带你过去。

27:09
Chris here.
克里斯。

27:14
Okay, I think that's better.
好吧，我觉得这样好多了。

27:26
That's good enough. Thank you. I was just telling, I was telling the class about the importance of documentation and recording that four choices when it comes to doing the project.
这就够了。谢谢你！我只是在告诉，我在告诉全班关于文档和记录的重要性，当涉及到做项目时，这四个选择。

27:47
I had a question from Vanessa about whether how old this process of documentation is.
凡妮莎问了我一个问题，这个文件处理过程有多久了。

27:54
How old it is.
它有多古老。

27:55
Like, when did people start doing this documentation work? Oh, goodness me. I mean.
比如，人们什么时候开始做文档工作的？哦，天哪。我的意思。

28:00
Ideally, like, predates the predates the lab, or anything like that. I mean, if you're doing a project like this, then, you know.
理想情况下，在实验室之前，或者类似的东西之前。我是说，如果你在做这样的项目，那么，你知道。

28:12
We could think about this in more wide terms in terms of, sort of, data analysis and things like that. You know, people have been being taught to sort of document the process for a very long time.
我们可以从更广泛的角度来考虑这个问题，比如数据分析之类的。你知道，很长一段时间以来，人们一直被教导要记录这个过程。

28:25
So since the dawn of computer science, so we're talking sort of 7080 years, you know, really is important to document your process, because.
所以自从计算机科学出现以来，我们说的是7080年，你知道，记录你的过程真的很重要，因为。

28:36
Reproduceability is the important thing. You need people to be able to reproduce what you've done when you're creating experiments. So in computer science and data analysis.
可重复性是很重要的。当你在做实验时，你需要人们能够重现你所做的事情。在计算机科学和数据分析中。

28:48
But very much.
但是非常喜欢。

28:50
I mean, it goes back to data collection, right? So we think about collecting statistics and being able to quantify.
我是说，这又回到了数据收集，对吧？所以我们考虑收集统计数据并进行量化。

29:02
What we're missing, right? So even the four digital analysis, we think about collecting data, collecting census records, right in that.
我们错过了什么，对吧？所以即使是四数字分析，我们也在考虑收集数据，

收集人口普查记录，就在那里。

29:14
Thinking about the modeling and what we're missing out the probabilities. That's all documentation.
想想这个模型以及我们错过的概率。这就是所有的文档。

29:22
Exactly well. It's an older art I found in digital.
完全好了。这是我在数码领域发现的一种更古老的艺术。

29:26
It is. It is. We're all just building on things that have gone before.
它是。它是。我们都只是建立在过去的基础上。

29:31
Anyway, a very important thing to think about. As you do your projects. What else do we talk about? We talk about Moscow.
不管怎样，这是一个很重要的问题。当你做项目的时候。我们还聊些什么？我们谈论莫斯科。

29:40
Okay. We've been doing some readings about text analysis and workloads and understanding the context of a data set before you dive in.
好吧。在深入研究之前，我们已经阅读了一些关于文本分析和工作负载的资料，并了解了数据集的上下文。

29:54
I say all at the start of the digital project design process at the moment.
我说的都是在数字项目设计过程的开始阶段。

30:00
So this is Chris, by the way, I realized I didn't say, but Chris is like Gale. He's fantastic. No.
顺便说一下，这是克里斯，我意识到我没有说，但克里斯就像盖尔。他太棒

了。否。

30:09
For a few years now, and he's always very kind in spending some time with us here for our module to give us a sense of some of the text analysis tools and methods that you've read about, right?
这几年来，他总是很友好地花时间和我们一起上我们的模块让我们了解一些你们读过的文本分析工具和方法，对吧?

30:21
Set within a system called the Digital Scholarship Lab, which I us has access to. I will let Chris describe the lab in more detail than I can.
设置在一个叫做数字奖学金实验室的系统里，我可以进入这个系统。我会让克里斯比我更详细地描述实验室。

30:31
But sure, chris, would you like to take it from here?
当然，克里斯，你愿意接手吗?

30:34
Thank you to us, and thank you for inviting me again. It's always such a joy to see this class. I'm delighted to be here. So.
谢谢你，谢谢你再次邀请我。看这堂课总是很开心。我很高兴来到这里。所以。

30:44
Let me share my screen.
让我分享我的屏幕。

30:47
And hopefully you can see a powerpoint to begin with. So.
希望你们一开始就能看到幻灯片。所以。

30:53
Welcome everybody. My name's Chris out, and I've heard of academic

partnerships at Gale, which means that, so my job is to work with.
欢迎每一个人。我叫克里斯，我听说过盖尔大学的学术合作，也就是说，我的工作就是和。

31:05
Researchers, to work with academics, and indeed, to teach, as I'm doing now, mostly around sort of digital humanities. So I'm sure you've.
研究人员，与学者合作，实际上，像我现在所做的那样，主要是围绕数字人文学科。所以我相信你。

31:18
Well, being taught about that and being taught about, you know, digital history, obviously. And I work with the sort of academic community.
嗯，很明显，在学习这些知识的同时，也在学习数字历史。我和学术团体一起工作。

31:28
Broadly around the world.
在全世界范围内。

31:30
Digital humanities. And what today's workshop is going to be is sort of split into two parts. So in the first part, I'm going to be doing quite a lot of talking.
数字人文。今天的研讨会将分为两个部分。在第一部分中，我将做大量的讨论。

31:41
Where I try and give you some of the backgrounds to help archives build and help digitize archives, and indeed, what you could do with those archives.
我试着给你们一些背景知识来帮助档案建立和数字化档案，以及你们可以用这些档案做些什么。

31:53

Anyway. So what we're going to call sort of text money and.
无论如何。我们把它叫做短信钱。

32:00
So I just have reason. It mutes every time I move on a screen, but then it stops. So we're fine now. So here are my objectives for today. So.
所以我有理由。每次我在屏幕上移动时，它都会静音，但随后就会停止。所以我们现在没事了。这是我今天的目标。所以。

32:16
What I'm going to be doing is sort of giving you a behind the scenes look of a digital archive. I'm sure this is something that you're going to be used to Using.
我要做的是给你们一个数字档案的幕后介绍。我相信这是你会习惯使用的东西。

32:26
But you might not understand how it exists. You know, the decisions that were made in its development, and that.
但你可能不明白它是如何存在的。你知道，在它的发展过程中所做的决定。

32:35
For you as kind of masters students, I think it's an incredibly important thing to understand, because when you understand how these archives come together.
作为硕士生，我认为理解这一点非常重要，因为当你理解这些档案是如何汇集在一起的。

32:45
And how they're built. You can understand why you need to be critical when using them, because no digital archive is perfect. They are all functions of various different decisions.
以及它们是如何建造的。您可以理解为什么在使用它们时需要谨慎，因为没有一个数字档案是完美的。它们都是各种不同决策的功能。

32:59
That have been made, some of them very subjective, and that affects what is in the archive and how it's presented and delivered to you. So it should affect.
其中一些是非常主观的，这影响了档案中的内容以及它们呈现和传递给你的方式。所以应该会有影响。

33:12
How you use it. Okay, so my goal is to make sure that you can use these archives as effectively as you possibly can.
如何使用它。好了，我的目标是确保你们能尽可能有效地利用这些档案。

33:21
Okay. And as well as you possibly can, that means to be able to kind of understand how they come together.
好吧。尽你所能，这意味着能够理解它们是如何结合在一起的。

33:28
And to be critical about them. So that will be our first objective. Our second objective is just to introduce and to build on some of the discussions that.
并对他们持批判态度。这是我们的第一个目标。我们的第二个目标是介绍并以一些讨论为基础。

33:38
We already had around Moscow around data analysis and things like that. We're going to introduce text and data mining concepts, and we're going to talk about the Gale Digital Scroll Lab yet that platform that you have.
我们在莫斯科已经有了数据分析之类的东西。我们将介绍文本和数据挖掘的概念，我们将讨论盖尔数字卷轴实验室，你们拥有的平台。

33:48
Available to you now any us of how you might use that within your project to analyse data that you're interested in?
你现在可以在你的项目中使用它来分析你感兴趣的数据吗?

33:58
And then the second half of our session today. So the first half is probably going to take about an hour, and then we're going to have a 1015 minute break where we get to sort of stretch your legs and get a drink.
然后是我们今天的下半部分。前半部分大概会花一个小时，然后我们会有1015分钟的休息时间，在那里我们可以伸展一下腿，喝点东西。

34:12
And then there'll be a hands on activity where you get to experiment with data within the lab, and you get to actually have a play around. And I'll show you.
然后会有一个动手活动，你可以在实验室里用数据做实验，你可以真正地玩一玩。我会展示给你们看。

34:24
Help. You can do that, but then you get to just go and play with it and get to work with some data, get to analyze data. And most important.
的帮助。你可以这么做，但之后你要做的只是去摆弄它，去处理一些数据，去分析数据。最重要的是。

34:33
And exactly crucial get to think about the analysis that you've done and understand, you know, is it right? It could be changed? It, could it be different?
最关键的是要思考你所做的分析并理解，你知道，它对吗？可以改变吗？会有什么不同吗?

34:44
How might I interpret the visualization that I've done? And that will take us up for the remainder of our session for about the next 2 h or so.
我该如何解释我所做的可视化呢？这将占据我们接下来两个小时的剩余时间。

34:55
Okay, there's always the opportunity to ask questions, so I've got to stop

at various points. And if you have any questions, and then do, feel free to ask them. We do Have.
好的，总是有提问的机会，所以我不得不在不同的地方停下来。如果你们有任何问题，请随时提问。我们确实有。

35:05
Quite a lot of you. So I'll ask you to keep your questions, to have various things for the end, or at various breaks, while I ask you if you've got any questions. Okay.
很多人。所以我会让你们把问题留到最后，或者在休息的时候，我会问你们有什么问题。好吧。

35:15
So that is it for me, for the objectives, and I'm going to dive straight in. And I don't want to assume that, you know, who gan is.
这就是我的目标，我要直接切入主题了。我不想假设，你知道，谁是gan。

35:27
And indeed, you know where I'm coming from here, so let me talk about it very briefly. Gale has been around since the 1950s. We started as a publisher of reference work.
事实上，你们知道我从何而来，所以让我简单地谈一谈。盖尔自20世纪50年代以来一直存在。我们以出版参考书起家。

35:39
Okay. So big, multi volume sets of books. Okay, so think, like encyclopedias, dictionaries, that sort of things. That's where we started.
好吧。这么大，多卷的书。好的，想想百科全书，字典之类的东西。这就是我们开始的地方。

35:48
We started in America in Michigan in 1954, developing these big, multi volume setting works. But we're probably best known.
1954年，我们在美国的密歇根州开始创作这些大型的、多卷的背景作品。但我们可能是最出名的。

35:58
And indeed, what we're going to be talking about today and throughout academia today as publishers of this Okay. So digital, primary source article.
事实上，我们今天要讨论的以及整个学术界作为这本书的出版商。所以数字的，原始来源的文章。

36:08
So we are. Gale is the world's biggest commercial publisher of digitized primary sources we work with.
我们就是这样。Gale是我们合作的世界上最大的数字化原始资源商业出版商。

36:18
Archives and libraries around the world. Over 300 of the world's leading archives, or national libraries, that sort of thing.
世界各地的档案馆和图书馆。超过300家世界领先的档案馆，或者国家图书馆，诸如此类。

36:29
We go in and we digitize their material, we basically, essentially what that is is we take really high quality pictures of it, pictures that look a little bit like the one we're looking at here.
我们进去把他们的资料数字化，基本上，基本上就是我们拍下高质量的照片，这些照片看起来有点像我们现在看到的这张。

36:39
And we turn it into databases. We turn it into platforms that you are able to search through. And this is the very first page of the very first archive that we developed back in 2002.
然后我们把它变成数据库。我们把它变成了你可以搜索的平台。这是我们在2002年开发的第一份档案的第一页。

36:54

So we've been doing this for about 25 years. Okay. And this is the first page of the one of it not the most important or most recognizable.
我们做这个已经有25年了。好吧。这是其中的第一页不是最重要的，也不是最知名的。

37:04
Newspaper in the whole world. Okay. This is the Daily Universal Register on 1 january 1785. Now, this newspaper isn't still cool.
全世界的报纸。好吧。这是1785年1月1日的《世界日报》。现在，这份报纸已经不酷了。

37:14
The Daily Universal Registry. It's actually called Something I'm not going to ask you to guess, but this is the most famous newspaper in the world. This is the Times Newspaper. Okay, so this is the Times of London, and this is the very first page.
每日全球登记。它的名字其实是，我不打算让你们猜，但这是世界上最有名的报纸。这里是《泰晤士报》。这是伦敦的《泰晤士报》，这是第一页。

37:26
Of the very first issue of The Times of London. It wasn't called The Times. For another three years. It started being called The Times in 1788, but for three years, it was the Daily Universal Register.
伦敦《泰晤士报》的第一期。它不叫《纽约时报》。再过三年。它在1788年开始被称为《泰晤士报》，但有三年的时间，它被称为《每日环球登记》。

37:37
And in 2002, we digitized every page of every issue of the Times newspaper for about 200 years, and we turned it into this.
2002年，我们把200年来每期《泰晤士报》的每一页都数字化了，我们把它变成了这样。

37:48
The Times Digital Archive. Now, you have this at the US, and you can see that we've had more years since then. In fact, we.

时代数字档案馆。现在，你在美国有这个，你可以看到，从那以后我们有更多的年份。事实上，我们。

37:57
We've now got the Times going up to, I think it's 2005, I'm sorry, 2025 now, so about 230 years of what they call the world's newspaper of record.
《纽约时报》的历史应该是2005年，不好意思，应该是2025年，也就是230年的历史。

38:09
Okay, that's what the Times refers to them as, and this is an incredibly important thing for you.
好吧，《纽约时报》就是这么称呼他们的，这对你来说非常重要。

38:16
Because if you wanted to use the Times newspaper, as I said, one of the most important newspapers in the world, not just for information about the UK.
因为如果你想使用《泰晤士报》，就像我说的，它是世界上最重要的报纸之一，不仅仅是关于英国的信息。

38:27
Or about London or whatever. But one of the very first newspapers about, the first newspaper in the world to have foreign correspondents. So if you have correspondence based around the world, incredible resource for people studying.
或者是关于伦敦什么的。但是最早的报纸之一，世界上第一家拥有外国记者的报纸。如果你有来自世界各地的信件，这对人们学习来说是一个不可思议的资源。

38:39
Asia or Australia, new Zealand or India or Africa, all of these places in the last of 230 years, in which.
亚洲，澳大利亚，新西兰，印度，非洲，所有这些地方在过去的230年里。

38:51
The UK has had incredibly vested interests, okay, going first through the British Empire and then through, obviously, being able to have sort of diplomatic relations.
英国拥有令人难以置信的既得利益，首先通过大英帝国，然后显然，能够建立某种外交关系。

39:02
Of commercial relations with countries around the world. So this is an incredibly important resource for anyone studying the history of the last group.
与世界各国的商业关系。所以这对于研究最后一个族群历史的人来说是非常重要的资源。

39:12
200 or so more years. And in Singapore, the National University of Singapore, if you want to get access to this.
200年左右。在新加坡，新加坡国立大学，如果你想要访问这个。

39:22
And if you want to read what is on that, you know, the.
如果你想看看上面写了什么，你知道的。

39:26
The first issue of the Times newspaper from 785. You have two options. Okay? Your first option is to get on a plane and to go across to London.
785年的第一期《泰晤士报》你有两个选择。好吧?你的第一个选择是乘飞机去伦敦。

39:36
And to go and try and get access to this in the physical form. Now, physical archives are amazing, but plane rides are expensive, okay? And you would.
然后去尝试以物理形式接触它。实物档案很好，但坐飞机太贵了？你会的。

39:46
I would imagine, a couple of weeks. Because when you go to the physical archive, it's all about, you know, taking boxes of papers off a shelf or down volumes of papers and flicking through till you found what you wanted.
我想应该是几周吧。因为当你去实体档案馆的时候，你知道的，就是从架子上拿起一箱一箱的文件，或者放下一卷一卷的文件，翻看一遍，直到找到你想要的。

39:59
You know, you might be interested in looking at things to do with Singapore, or you might be interested in looking at Japanese relations or whatever it was that you were interested in. You're flicking through physical copies of the newspaper to find what you want.
你知道，你可能对与新加坡的关系感兴趣，或者你可能对与日本的关系感兴趣，或者任何你感兴趣的事情。你正在翻阅报纸的实体副本，以找到你想要的东西。

40:13
So expensive and time consumer. And so your other option is here. You're very lucky that you go.
如此昂贵和耗时。所以你的另一个选择在这里。你能去真是太幸运了。

40:22
And us is that your university buys this from this, and this is what we've done. So you have access to this today, and you can search through this, and that means searching through.
你们的大学买下了这个，这就是我们所做的。所以你今天可以访问这个，你可以搜索它，这意味着搜索。

40:32
Every page of every newspaper for the 230 years that you have access to it. And that is a really, really useful thing.
230年来你能看到的每一份报纸的每一页。这是一个非常非常有用的东西。

40:41

So that is the very first article that we did. The second one is another archive that you have, and that if you're into the eighteenth century, this is the most important.
这是我们写的第一篇文章。第二个是你们有的另一个档案，如果你进入18世纪，这是最重要的。

40:50
Digital archive to do with the eighteenth century. This is Echo, or eighteenth century collections online. And when we published this back in 2003, this was the world's biggest digitization.
数字档案与18世纪有关。这是Echo，也就是十八世纪的在线收藏。当我们在2003年发表这篇文章时，这是世界上最大的数字化。

41:01
Okay. And that is because what ECHO contains is every significant book written in English in the eighteenth century. It's evident.
好吧。这是因为ECHO包含了18世纪用英语写的每一本重要的书。这是显而易见的。

41:10
Okay. We've just released part three of it, and that means it adds up to about 35 million pages, from about 200 or 210000 books.
好吧。我们刚刚发布了它的第三部分，这意味着它加起来大约有3500万页，来自大约200或21万本书。

41:21
So if you are studying anything to do with the eighteenth century, and, you know, england being one of the kind of pioneers of.
所以如果你在学习任何与18世纪有关的东西，你知道，英国是先驱之一。

41:32
Of publishing in the eighteenth century. You know whether you're interested in history, or whether you're interested in literature or economics or politics, or whatever it might be.
在18世纪出版的。你知道你是否对历史感兴趣，或者你是否对文学或经济或

政治感兴趣，或者任何可能的东西感兴趣。

41:42
This is one of the primary resources that you might use if you're studying that. And this was the second, everything that we did.
这是一个主要的资源，你可能会使用，如果你正在研究。这是我们做的第二件事。

41:49
And in the sort of subsequent 23 or 24 years, we have built up, as I said, the world's biggest collection of digitized primary sources.
在接下来的23或24年里，我们建立了，如我所说，世界上最大的数字化原始资料的集合。

42:00
And your university subscribes to, or has bought, I should say, a lot of things, and these are the ones that you have. In fact, I think you've got a few more than these now.
你的大学订阅了，或者应该说，买了很多东西，这些就是你拥有的。事实上，我觉得你现在有比这些更多的了。

42:11
It is massive. Okay. The Gale collections cover about nine centuries. They cover material from six continents. So our source library partners are all over the world, whether they're the British Library.
它是巨大的。好吧。盖尔的藏品涵盖了大约9个世纪。它们覆盖了六大洲。所以我们的资源图书馆合作伙伴遍布世界各地，不管是大英图书馆。

42:26
In the UK, the National Archives in the US, the Shanghai Public Library in China. And, you know, 300 or more archives around the world as well.
英国的、美国的国家档案馆、中国的上海公共图书馆。而且，你知道，全世界也有300多份档案。

42:37

They cover material from all over the place. They cover a hundred different types of material. So newspapers of one material, books and another.
它们覆盖了来自各地的材料。它们涵盖了一百种不同类型的材料。一种材料的报纸，书籍和其他材料。

42:46
And another hundred or so other types as well. So this is an absolute treasure tool for you.
还有大约一百种其他类型。所以这对你来说绝对是一个宝藏工具。

42:53
As you're studying digital history in us, this is massive, so it's important to know what you have. It's also important to know where you are, to find it.
当你在学习我们的数字历史时，这是巨大的，所以知道你有什么很重要。知道你在哪里，找到它也很重要。

43:03
I've put a link here for NS library access, that there's a QR code that will take you to your library. Your library is always your first one.
我在这里放了一个nslibrary access的链接，有一个QR码会带你到你的图书馆。你的图书馆永远是你的第一个。

43:12
Okay, I'm going to share this. I will share this deck with you, the slide deck with you after we say, we'll have this link, but just.
好吧，我要分享这个。我会和你们分享这个幻灯片在我们说，我们会有这个链接之后，但是。

43:20
You know, go on out of your library. You're looking for a database table, and in there they will be able to point you to all the games and articles that you Have.
你知道的，离开你的图书馆。你正在寻找一个数据库表，在那里他们将能够指向你所有的游戏和文章。

43:29
Okay, so library very much.
好的，非常喜欢图书馆。

43:32
So that's your Gale is, and that's what you have, and that's how you can find what you've got. Let's talk about how these archives are actually built and what they are.
这就是你的盖尔，这就是你所拥有的，这就是你如何找到你所拥有的。让我们来谈谈这些档案是如何建立的，它们是什么。

43:45
And why you should sort of be critical about them. And this is the bit of taking behind the scenes of a digitization project.
以及为什么你应该对他们持批评态度。这是一个数字化项目的幕后工作。

43:52
So the first place is step one is that we start with the idea, and these ideas come from these people. This is our editorial.
所以第一步是我们从想法开始，这些想法来自这些人。这是我们的社论。

44:04
They're based in the US, they're based in Singapore, and they're also based primarily in the UK.
他们的总部设在美国，他们的总部设在新加坡，他们也主要设在英国。

44:13
As well. And their job is.
也。他们的工作是。

44:17
Essentially to.
本质上。

44:18

What?
怎么啦?

44:20
With our source library partners, so that might be the British Library or the National Archives, but also to work with other customers.
与我们的源图书馆合作伙伴，可能是大英图书馆或国家档案馆，但也与其他客户合作。

44:28
So our customers are.
我们的客户也是如此。

44:30
Universities around the world, but which any us is born in Oxford or Cambridge or wherever.
世界各地的大学，但我们中有谁出生在牛津或剑桥或其他地方。

44:40
But essentially what their job is is to understand what professors, like professor One might be teaching in three.
但从本质上讲，他们的工作是了解教授们，比如教授1，可能会在三年级教什么。

44:49
Five years, okay, because it's a lot of process of building up. And I'm going, the process I'm going to show, takes two or three, or sometimes even longer.
五年，好吧，因为这是一个漫长的建设过程。我要展示的过程，需要两到三个人，有时甚至更长。

45:00
Is in order to actually go from writing through to execution. But their job is to understand what is writing to construct in the future. What are people?
是为了从写到执行。但他们的工作是理解写作是为了构建未来。人是什么?

45:12
Going to want? Are they going to want material in Chinese? Are they going to want material or LGBT Q studies? Are they going to want? I don't know. Things on political Extremism.
想要什么？他们想要中文的材料吗？他们想要的是材料还是LGBT Q研究？他们会想要吗？我不知道。关于政治极端主义的事情。

45:23
Or whatever. And then they start working with our source library partners. And these are partners like these. This is the British Library, and I think the US National Archives there.
之类的。然后他们开始与我们的资源图书馆合作伙伴合作。这些就是这样的伙伴。这是大英图书馆，我想美国国家档案馆也在那里。

45:34
And here we have Windsor Castle, which is, I think that's when it goes, I think I'm right saying, this is one of our latest source library partners. Gala is the game.
这里是温莎城堡，我想这就是它的由来，我想我是对的，这是我们最新的图书馆合作伙伴之一。Gala是游戏。

45:44
There's been archives of Australia, new Zealand. So they start working with the partners that we already have, as I said, 300 or more partners to work with them to see if they have collections.
有澳大利亚和新西兰的档案。所以他们开始与我们已有的合作伙伴合作，就像我说的，有300个或更多的合作伙伴与他们合作，看看他们是否有藏品。

45:58
In their archives that might meet the needs of our universities. Okay, so if in five years time, people are going to start, we look, start.
在他们的档案里，也许能满足我们大学的需要。好吧，如果在五年的时间里，人们开始，我们看，开始。

46:11
If they're going to start researching and teaching political extremism, then we're looking at these archives to understand what have they got?
如果他们要开始研究和教授政治极端主义，那么我们要看这些档案来了解他们有什么？

46:20
That might be relevant to political extremism.
这可能与政治极端主义有关。

46:25
Okay, so once they've built the idea up, they don't have to start sort of building a business case. And that involves the pitch. and this is actually the pitch, is basically pitching this internally.
好的，一旦他们有了想法，他们就不需要开始建立商业案例了。这就涉及到音高。这实际上是推销，基本上是内部推销。

46:39
Because it's not as simple as the editors sort of come up with an idea. And then we say, we'll give you all the money that you need to be able to build this archive. Because digitizing archives at the scale that we do, it is expensive.
因为这并不像编辑们想出一个想法那么简单。然后我们说，我们会给你所有的钱，你需要能够建立这个档案。因为像我们这样大规模地数字化档案，是很昂贵的。

46:54
Okay. It's expensive, as you're going to see, to higher equipment, to digitize material, to convert that material into something that might.
好吧。这是昂贵的，你会看到，更高的设备，数字化材料，将材料转化为可能的东西。

47:05
Useful. So they have to build a business case. They have to say, professors in Singapore are going to be teaching political extremism in five years'

time. And we think.
有用的。所以他们必须建立一个商业案例。他们不得不说，新加坡的教授将在五年内教授政治极端主义。我们认为。

47:16
That the universities in Singapore and in China and in Australia and in the UK are going to spend excellent money on buying archives.
新加坡、中国、澳大利亚和英国的大学会花很多钱购买档案。

47:27
That will meet that particular need. And this is what we mean by a business case. And, you know, there are people like me who hear these pictures, who hear these business Cases.
这将满足这种特殊的需求。这就是我们所说的商业案例。你知道，有像我这样的人听过这些照片，听过这些商业案例。

47:38
And basically decides whether it's worth us investing. And often costs we think money. I'm talking about hundreds of thousands of dollars, and some cases.
基本上决定了我们是否值得投资。我们通常会想到钱。我说的是几十万美元，还有一些案子。

47:49
To preserve material to help them.
保存资料来帮助他们。

47:54
Material fit for digitizing, and then to digitize these material and build a digital archive.
适合数字化的材料，然后将这些材料数字化，建立一个数字化档案。

47:59
And that we are able to say.
我们可以说。

48:01
But once the pictures happen, and once the business case has been signed off, and we've agreed we're going to go ahead with this, Then it comes down to step three, and step three is negotiations.
但是一旦拍摄完成，一旦商业案例被签署，我们就同意继续进行，然后就到了第三步，第三步就是谈判。

48:14
And this is just about working with the source library partners to negotiate for.
这只是与源图书馆合作伙伴协商的问题。

48:19
Us being able to digitize these materials. So what I mean by that is, generally speaking, we, when we digitize materials, it's in the British Library.
我们能够将这些材料数字化。所以我的意思是，一般来说，当我们把资料数字化时，它是在大英图书馆里。

48:34
We tend to negotiate a percentage of the sales that we make, that will then go back to the British Library, which is good for them because they've done that an income.
我们倾向于协商我们销售的一定比例，然后将返回给大英图书馆，这对他们来说是好事，因为他们已经做了一笔收入。

48:45
Constraint, and that helps these source library to kind of keep doing the work that they're doing. It's an incredibly important part of how they're able to keep funding.
约束，这有助于这些源库继续做它们正在做的工作。这是他们保持资金来源的一个非常重要的部分。

48:54

The work that they do, but negotiations have to happen. And this is that there are also negotiations with our digitization partners. So.
他们所做的工作，但谈判必须进行。我们还与数字化合作伙伴进行了谈判。所以。

49:03
We work with. We don't do the digitization ourselves, necessarily. We contract in.
我们一起工作。我们自己不一定要进行数字化。我们收缩。

49:11
Visualization vendors who will come.
可视化供应商谁会来。

49:15
That they will visit London or Shanghai or wherever the source library is, and they will be contracted with.
他们会去伦敦或者上海或者任何一个图书馆的地方，他们会被签约。

49:23
And doing the digitization. Some of these partners are expert in certain things, so some might be expert in, you know, fifteenth century materials, or sixth things, you know, ancient materials. Some might be expert in working with newspapers.
进行数字化。有些合伙人是某些方面的专家，所以有些人可能擅长，你知道，十五世纪的材料，或者第六世纪的东西，你知道，古代材料。有些人可能擅长与报纸打交道。

49:38
And things like that. So often it comes down to what type of material we're working with on a particular archive is, who we might contract to get involved with doing the actual digitization.
诸如此类的事情。因此，通常情况下，这取决于我们正在处理的特定档案的材料类型，我们可能会与谁签订合同，参与实际的数字化工作。

49:51
And so once all that has been done, then we get onto the fun bit of actually creating and actually digitizing the material. Step four.
一旦所有这些都完成了，我们就进入了真正有趣的部分，那就是创造和数字化这些材料。第四步。

50:02
In this process. So step one here, and you can do it stand one. And that involves incredibly sophisticated, expensive technical material that looks a bit like this.
在这个过程中。第一步，你可以站着做。这涉及到非常复杂，昂贵的技术材料，看起来有点像这样。

50:14
That is used to scan the materials. And this is a long and drawn out process. This is my favorite scanner, actually. This is one that we use for You can see, it's got a sort of reshape craving.
那是用来扫描材料的。这是一个漫长的过程。这是我最喜欢的扫描仪。这是我们用来你可以看到，它有一种重塑的渴望。

50:29
There, and this is one that we use for bound volumes, or books. Some of you in newspapers, in bound volumes as well. And this is my favorite, because this actually is used for rare books. So books where?
这是我们用来表示合订本或书籍的。你们中的一些人在报纸上，在合订本上。这是我最喜欢的，因为这实际上是用来放珍本书籍的。那么书在哪里呢?

50:42
So often, the way that this works is that you might have an operator, sort of turning the pages in between taking the image and the image is just really a very high quality.
通常，它的工作方式是你可能会有一个操作员，在拍摄图像之间翻页图像的质量非常高。

50:54
Photograph. Okay, that's and it's a different photograph. It scanned into the computer there, and an operator might turn the pages by hand. But sometimes when the original physical.
照片。好吧，这是这是另一张照片。它扫描到那里的电脑，操作员可以用手翻页。但有时当原来的物理。

51:09
Materials are incredibly fragile or incredibly precious. We don't even trust people to turn the pages because it might degrade the paper. It might even destroy the paper.
材料是非常脆弱或非常珍贵的。我们甚至不相信人们会翻页，因为这可能会降低纸张的质量。它甚至可能毁掉报纸。

51:22
Because it's so fragile. So what this has, this has a vacuum that it can use to sort of suck the page up so it doesn't actually touch the page, but it pulls the page over.
因为它太脆弱了。所以它有，它有一个真空可以用来把纸吸起来所以它实际上没有接触到纸，但是它把纸拉过来。

51:34
And that's how it turns the face that every human being had a hadn't touched it. And that's why I love this, because I think it's amazing. So this is the sort of scanning process.
这就是它如何让每个人的脸都变成没碰过的样子。这就是我喜欢它的原因，因为我觉得它很神奇。这就是扫描的过程。

51:43
And this is a law of a drawn out process. This takes months and months and months. It can take even years, in some cases, because we're scanning.
这是一个漫长过程的规律。这要花好几个月好几个月。在某些情况下，这可能需要几年的时间，因为我们是在扫描。

51:53
Well, what sort of size are we talking about? A sort of smaller archive for us is maybe 350, 400000 pages.
我们说的是什么尺寸的？对我们来说，一个较小的档案大概有35到40万页。

52:02
Okay. A medium size archive is, I don't know, a million pages, one and a half million pages. A big archive for us is four, five, 6 million.
好吧。一个中等大小的档案，我不知道，一百万页，一百五十万页。对我们来说，一个大的档案有四五百万，六百万。

52:12
Changes. So you're talking about masses of material, okay, lots and lots of books and papers that need to be separately, kind of taken from where they are in the archive, brought to the scanning room, loaded onto a scanner.
的变化。所以你说的是大量的材料，好吧，很多很多的书和论文需要分开，从档案室里拿出来，带到扫描室，装上扫描仪。

52:27
And then each page scanned individually so that there is a perfect, or as perfect, a digital facsivity as we can do there.
然后每一页都被单独扫描，这样就有了一个完美的，或者是完美的，我们可以在那里做的数字facvity。

52:38
And so you can see why it takes a long time, and is an expensive process. But once we have all the pages and all of the pages within the various collections that we want to collect digitized.
所以你可以看到为什么它需要很长时间，而且是一个昂贵的过程。但是一旦我们有了所有的页面，所有我们想要数字化的各种收藏中的页面。

52:51
The next step involves something that is called preproduction, and preproduction is just getting all of the kind of relevant information around

the.
下一步是所谓的预生产，预生产就是收集所有相关的信息。

53:03
Image that will help make it social and discoverable. And one of the key parts of this is around meta data.
这将有助于它的社交性和可发现性。其中一个关键部分就是元数据。

53:13
Metadata is just data about data. Okay. And here's my favorite example. The data in this case is a Patriot account. The metadata is what that file name is.
元数据只是关于数据的数据。好吧。这是我最喜欢的例子。这个案子里的数据是爱国者的账户。元数据就是文件名。

53:24
Who digitized or who took a picture of the cat when that picture was taken, I don't think where it was taken, but.
是谁把这只猫数字化了，或者是谁在什么时候拍的这张照片，我不记得是在哪里拍的，但是。

53:32
Okay. So meta data tells you about the data, where it was from, when it was from, who wrote it, who took it, whatever it might be.
好吧。元数据告诉你数据的信息，它来自哪里，什么时候，谁写的，谁拿的，等等。

53:41
Okay. Metadata is incredibly important to any digitized archive, because it helps make the material that you're looking for discoverable. You'll be using it all the time.
好吧。元数据对于任何数字化档案来说都是非常重要的，因为它可以帮助你发现你正在寻找的材料。你会一直用到它的。

53:51

Without ever even knowing that you're using it. To give you an example of our metadata, and here's a collection that we have called the International Heritage View. The International Heritage of UNIS is the New York Times.
甚至都不知道你在用它。给大家举一个元数据的例子，这是一个我们称之为国际遗产视图的集合。联合国大学的国际遗产是《纽约时报》。

54:03
Or it's a paper from the New York Times Post Publishing Paris. Okay. So, like in the Second World War, I actually evacuated comparison.
或者是巴黎《纽约时报邮报》出版的一篇文章。好吧。所以，就像在第二次世界大战中一样，我实际上是在进行比较。

54:12
Somewhere else. And one of the things that you need to understand is that little spreadsheet there at the bottom, because the International Heritage Union has not always been called.
别的地方。你需要了解的一件事是底部的那个小表格，因为国际遗产联盟并不总是被称为。

54:24
The International Heritage Tribune from 1887 to 1935. It was called the New York Hill from 1935 through to 1967. It's called the New York Herald Tribune. And then from 1968 through to 2013, it was called the International.
1887年至1935年的《国际遗产论坛报》。从1935年到1967年，它被称为纽约山。它叫《纽约先驱论坛报》然后从1968年到2013年，它被称为国际。

54:37
Why is that important? What is important so that?
为什么这很重要？什么是重要的呢?

54:42
You may not know this, but what you want you know that the international attribute has been running since 87 in one form or another. And you want to know that if you search that.

您可能不知道这一点，但您想知道的是，自1987年以来，国际属性一直以某种形式运行。你想知道如果你搜索它。

54:54
The international heritopy. It's also going to bring back the New world, a New York heritopy. How does it do that when it does that?
国际遗产。它也将带回新世界，纽约的遗产。它是怎么做到的呢?

55:03
By somebody linking, and this is what I mean by pay production, linking those bits of metadata together, so that when you search for International Heritage Review, it brings you back New Yorkerial Tribune.
通过链接，这就是我所说的付费制作，将这些元数据链接在一起，这样当你搜索《国际遗产评论》时，它会带你回到《纽约论坛报》。

55:16
And you look killed, okay? And this is what metadata is, and this is why it's so important, and again, a really labor intensive, really expensive process that.
你看起来像被杀了？这就是元数据，这就是为什么它如此重要，再说一次，这是一个非常劳动密集型，非常昂贵的过程。

55:27
Is all part of the process of building a digital archive.
都是建立数字档案过程的一部分。

55:30
The next step, step six is one of conversion. And essentially conversion is just turning a digitized image. So.
下一步，第六步是转变。从本质上讲，转换就是把一个数字图像转换过来。所以。

55:42
A digital photograph. Okay, like you or me, anyone can take, okay, a digital photograph into something that can be searched into something that can

form the basis of a digital archive, and we outsource this.
一张数码照片。就像你我一样，任何人都可以，把一张数码照片变成可以被搜索的东西变成可以形成数字档案的基础的东西，我们把这个外包出去。

55:57
And we have a vendor in India and his picture of these guys doing a lot of conversion work here, and this is what they do.
我们在印度有一个供应商他的照片是这些人在这里做很多转换工作，这是他们所做的。

56:05
And this is what I mean by conversion. And conversion is turning a digitized image that looks like this into this machine readable text.
这就是我所说的转化。转换就是把像这样的数字化图像变成机器可读的文本。

56:17
Okay. And this is maybe the most important part of the whole process for a digital log code. And certainly for us thinking about text and data, like.
好吧。这可能是整个数字日志编码过程中最重要的部分。当然，对于我们来说，考虑文本和数据，比如。

56:27
Okay, this is a process. It's really important for you, or the students of digital history to understand what is this. Why is it important?
这是一个过程。对于你们，或者是数字历史专业的学生来说，理解这是什么真的很重要。为什么它很重要?

56:36
And how does it work? Okay. Well, first of all, what it is, it's just a computer program. Okay. It's a computer program. And what this is a computer one called optical character recognition.
它是如何工作的？好吧。首先，它是什么，它只是一个计算机程序。好吧。这是一个计算机程序。这是一种叫做光学字符识别的计算机。

56:50
Or OCR. And OCR is a computer program by which that we upload all of the digitized pages of printed material.
或光学字符识别。OCR是一种计算机程序，通过它我们可以上传所有打印材料的数字化页面。

57:01
Okay. So books, newspapers, telegrams, whatever it might be, we upload those into ocrs. So for a digital archive, you know, that could be millions and millions of these images uploaded into.
好吧。所以书籍，报纸，电报，不管它是什么，我们把它们上传到电脑里。所以对于一个数字档案来说，你知道，那可能是数以百万计的这些图片上传到。

57:16
And what the OCR software does is it converts, it tries to read in averted corners. What?
OCR软件所做的是转换，它试着在倾斜的角落读取。怎么啦?

57:24
Is written on the printed page, and it converts it into a machine, reading text into a text file, an external file.
是写在打印页面上的，它把它转换成一台机器，把文本读入一个文本文件，一个外部文件。

57:34
Okay, um.
好的,嗯。

57:35
And why it does that is because that's how we make our, our database and support structure. Okay. So the really key thing to understand about digital archives from Gale and from a lot of other places.
为什么会这样，因为这就是我们建立数据库和支持结构的方式。好吧。所以了解盖尔和其他地方的数字档案的关键是。

57:50
Is that they're full to acceptable. So go back to what I was saying at the beginning. If you went to a physical archive and you wanted to find material on Singapore, then what you're doing is you're literally taking books or.
是满到可以接受。回到我一开始所说的。如果你去实体档案馆找关于新加坡的资料，你要做的就是拿书或者。

58:01
Or bound volumes, or boxes of papers on the shop.
或者是装订成册的书，或者是书店里一箱箱的报纸。

58:07
You know, the flicking through it to find references to something, you're literally kind of reading it.
你知道，翻看它找到一些参考资料，你实际上是在阅读它。

58:13
My references, as you can imagine, that's a really negative process. And digital are guys. When they came in in the kind of late nineties, completely revolutionized the way.
我的推荐信，你可以想象，这是一个非常消极的过程。数码是人。当他们在90年代末出现的时候，彻底改变了这种方式。

58:23
Okay, because now you could search for a word. And not only would it take you to the right, let's say the right newspaper, it would take you to the right.
因为现在你可以搜索一个单词了。它不仅会把你带到右边，比如说右边的报纸，它会把你带到右边。

58:33
Page of that newspaper, and it would take you to like part of that page, and it would highlight your word in brief. Okay, you can imagine that saves weeks.

报纸的某一页，它会带你去喜欢那一页的一部分，它会突出你的话。好吧，你可以想象这节省了几周时间。

58:41
Every time you're doing like one search, you can imagine how long that saves you over the course of over a career. Okay, this is a revolution in the way that we do this kind of research.
每次你做一次搜索，你可以想象这在你的职业生涯中节省了多少时间。好吧，这是我们进行这类研究方式的一次革命。

58:53
Okay. And the way that it works, the way that this full text searchability works, is biobis, bio OCR, what we're looking at now.
好吧。它的工作方式，全文搜索的工作方式，是biobis， bio OCR，就是我们现在看到的。

59:03
This digitized image, sorry, this machinery will text on the right hand side, this OCR. This is what you're searching.
这个数字化的图像，抱歉，这个机器会在右边显示文本，这个OCR。这就是你要找的。

59:13
Okay, this is what is making full text search work? Okay. And then we've got a little green box on the digitized image to show you where your search term turns up.
好了，这就是全文搜索工作的原理？好吧。然后我们在数字化图像上有一个绿色的小框，告诉你你的搜索词出现在哪里。

59:23
Okay. So that's what this is, and this is what.
好吧。这是这个，这是这个。

59:29
Why it's important. How does it work? Well, OCR is basic pattern

recognition. Okay. This is how OCR works essentially.
为什么它很重要。它是如何工作的？OCR是基本的模式识别。好吧。这就是OCR的工作原理。

59:38
It's looking for a series of kind of lines on a page. So in this case, if it's looking for a capital page, it's for a dagline going one way, another dag line going the other way, meeting it.
它在一页纸上寻找一系列的线条。在这种情况下，如果它在寻找一个大写的页面，它会寻找一条朝一个方向的线，另一条朝另一个方向的线，与它相遇。

59:50
At the top, and then a horizontal, straight line across the middle. Okay? And when it finds all those things together, it goes, yes, I know what this is.
在顶部，然后中间有一条水平的直线。好吧?当它发现所有这些东西在一起时，它会说，是的，我知道这是什么。

01:00:00
That's a capital A three. I'm going to move on. And that is how this works. This is how you can search through.
这是大写的a3。我要继续了。这就是它的工作原理。你可以这样搜索。

01:00:09
Any document, and it will take you to the right part of that document. Highlight your word in green. Okay. It's working with OCR.
任何文件，它都会带你到该文件的正确部分。用绿色标出你的单词。好吧。它与OCR一起工作。

01:00:16
But what I want you to consider is what happens when something goes wrong.
但我想让你们考虑的是当事情出错时会发生什么。

01:00:24

What happens when something is missing? Because one of the problems with what we do is we're working with material that is imperfect.
如果丢失了什么会发生什么？因为我们所做的其中一个问题是我们使用的材料是不完美的。

01:00:35
Okay. I said that gale's material covers about nine centuries. Okay. Imagine you're looking at something from, I don't know, the fifteenth or sixteenth century, maybe like an early newspaper in the sixteenth or seventh.
好吧。我说过盖尔的物质覆盖了9个世纪。好吧。想象一下，你正在看一些，我不知道，15或16世纪的东西，也许是16或7世纪的早期报纸。

01:00:45
Century.
世纪。

01:00:46
That would have been collected in, let's say, the sixteenth or seventeenth century, and then that could be kept somewhere, probably in the home of its collector.
这些可能是在，比如说，16或17世纪收集的，然后它们可能被保存在某个地方，可能在收藏家的家里。

01:00:58
Now, it might have been kept in a drafty attic or a leaky basement. And as time goes on, it could have got wet. It could have got burnt. You know, housefires happened, the paper could rot away.
现在，它可能被保存在通风的阁楼或漏水的地下室。随着时间的推移，它可能会被弄湿。它可能被烧焦了。你知道，一旦发生火灾，纸就会腐烂。

01:01:12
You ink could have faded. There are all sorts of things that mean that what you're looking at on the page might not be as clear as you would like it to be. So look, thinking about the example here, you might have.
你的墨水可能已经褪色了。有各种各样的事情意味着你在页面上看到的东西

可能不像你希望的那样清晰。看，想想这个例子，你可能。

01:01:26
Like two diagonal lines, like meeting at the top, like an upside down V, right? But it might be missing the horizontal bar.
就像两条对角线，在顶部相交，就像一个倒过来的V，对吧？但它可能会漏掉单杠。

01:01:35
Okay, in the middle, which is the bit, you know, that's the bit that's faded because of, who knows what, okay? Now, that's a problem for the OCR software, because when it comes to this upside down V.
好的，在中间，就是这一点，你知道，这一点褪色了，因为，谁知道呢？现在，这对OCR软件来说是个问题，因为当它涉及到这个倒过来的V。

01:01:48
It goes well, I think that's an A, it looks a bit like an A, but it could be other things. It could be, I don't know, like an end with a bit missing. It could be a W.
很好，我认为这是A，它看起来有点像A，但也可能是其他东西。可能是，我不知道，就像结尾少了点什么。也可以是W。

01:01:57
With two bits missing. It could be an end with two bits missing. So there it goes, right? I need to start writing some tests.
少了两个比特。可能是结尾少了两个比特。就是这样，对吧？我需要开始写一些测试。

01:02:04
I need to start figuring out what this might be by looking at the context of the letter in the sentence. Okay. So the first test it might do is it might ask, is this letter on its own on the page? Has it got like?
我需要通过观察句子中字母的上下文来弄清楚这可能是什么。好吧。所以它可能做的第一个测试是问，这个字母是单独在纸上的吗？它是什么样的？

01:02:19
White space in the site, because it knows that AIDS capital a's are often on their own in a way that MS or MS or vs or WS aren't.
在网站上留白，因为它知道艾滋病的大写字母a通常是独立的MS或MS或vs或WS不是。

01:02:29
Okay. And if it's on its end, it goes, okay. I think that's an end. Please pass. But if it's at the beginning of the word, it then goes, I still don't know what this is, but I'm going to look at the letters that come after.
好吧。如果它在它的末端，它就会。我想这就结束了。请通过。但如果它在单词的开头，它就会说，我还是不知道这是什么，但我要看看后面的字母。

01:02:39
Now imagine the letter that come after our PP L E Okay. It's then going to go, well, I was going to look at the dictionary. It's going to go, okay. I'm pretty sure that's a because I know that apples are one.
现在想象一下PP L E后面的字母。然后它会说，我要去查字典。它会走的，好的。我很确定这是a，因为我知道苹果是1。

01:02:50
What?
怎么啦?

01:02:53
And the reason I'm telling you this is the only thing you need to know is the more tests it runs, the lower its confidence gets.
我之所以告诉你这是你唯一需要知道的事情是因为它运行的测试越多，它的可信度就越低。

01:03:09
Okay. The lower the confidence gets that it's done a good job. It's done. It's got behavior that's perfect. That's what we want.
好吧。工作做得越好，信心就越低。这是完成了。它的行为是完美的。这就是我们想要的。

01:03:16
But it's confident that it's got a good job has gone down because it's had to run all these tests because the documentism was impacted.
但它很有信心，它的工作做得很好，因为它必须进行所有这些测试，因为它的文档性受到了影响。

01:03:25
Okay, so let's talk about the imperfection, okay, because this is a challenge for you as students of digital history. This is maybe the biggest one.
好的，让我们来谈谈不完美，因为这对你们这些数字历史的学生来说是一个挑战。这可能是最大的一个。

01:03:37
Can you research?
你会做研究吗?

01:03:38
Documents in digital history are perfect. Paper rocks. Game performance Digital photographs.
数字历史上的文件是完美的。纸的岩石。游戏表现数码照片。

01:03:46
Captured correctly, the imaging isn't done correctly, the conversion. There's a problem because.
捕获正确，成像不正确，转换。有个问题，因为。

01:03:53
Version. There are all sorts of things.
的版本。有各种各样的事情。

01:03:55
And the reason I wanted to show you this whole process, step by, step by step. There are issues at every step.
我想向你们展示整个过程的原因是，一步一步地。每一步都有问题。

01:04:03
That mean that the eventual conversion or the eventual OCR might not be about it, and that is important for you.
这意味着最终的转换或最终的OCR可能与它无关，这对你来说很重要。

01:04:13
To understand so that you can do the best research that you can do. So let me show you a good example.
去理解，这样你就能做最好的研究。我给大家举个例子。

01:04:19
Here's a little interview. But what happens when mostly I goes wrong? Excuse me all way I take my job. So what happens when I see I goes wrong?
这里有一个小采访。但如果我大部分时间都出错了怎么办？请原谅我的工作。那么当我看到我出错了会发生什么呢?

01:04:30
So here's some OC on. Now I'm going to do the test here an industry term. This is what we would describe as garbage.
这里有一些OC。现在我要做一个测试一个行业术语。这就是我们所说的垃圾。

01:04:41
Okay, this is absolute rubbish. You know, look at this. This is dreadful. Like I can see, maybe I don't know, 1011 words in there, captured correctly. This is really, really, really cool, so you can imagine.
好吧，这完全是垃圾。你知道，看看这个。这太可怕了。就像我可以看到的，也许我不知道，1011个单词，正确捕获。这真的，真的，真的很酷，你可以想象。

01:04:54
If you're searching through this for certain words.
如果你在搜索某些词。

01:05:00
Some of the ones aren't appeared.
有些没有出现。

01:05:01
Because the OCR is so poor. So the first question, well, the first thing you need to understand is that there is poor OCR.
因为OCR太差了。第一个问题，首先你要明白的是OCR很差。

01:05:10
Okay. So we've seen this Great. Okay. There is poor OCI. So why is this OCI so called? That might be your next question. And then to answer it.
好吧。我们已经看到了这个很好。好吧。OCI很差。那么这个OCI为什么这么叫呢？这可能是你的下一个问题。然后回答这个问题。

01:05:20
By looking at the image itself. So this is the image.
通过观察图像本身。这就是图像。

01:05:24
That this is the document, the social outcome. And the thing is, it's quite clear, right? It says, I don't know if you can see it there, but I'll really have it says, sir.
这就是文件，社会结果。问题是，这很清楚，对吧？上面写着，我不知道你能不能看到，但我真的会写的，先生。

01:05:35
I'm an unmarried woman and being educated in England and Scotland. I can speak with fluency several languages, and can by the laws and usages of Great Britain on any of the following occupations and professions.
我是未婚女性，在英格兰和苏格兰接受教育。我能流利地说几种语言，并能在以下任何职业和专业中遵守英国的法律和惯例。

01:05:46

If this is so clear, why?
如果这很明显，为什么呢?

01:05:51
Is the OCR survey. And the answer comes if we zoom out and we look at the document within the context of the page, because this newspaper article comes from a newspaper page that was.
是OCR调查。如果我们把它缩小，放在这个页面的上下文中看，答案就来了，因为这篇报纸文章来自一个报纸页面。

01:06:06
Bound in a volume. Okay, so it's a book, essentially, and the spine of the book is down here on the left hand side. Now, I want you to imagine this lay down a flatbed scanner, like a photo.
装订成一卷的好了，本质上这是一本书，书的书脊在左边。现在，我想让你们想象一下，把它放在一个平板扫描仪上，就像一张照片。

01:06:19
Okay, like a flatbed scan. And this is the problem, because what this means is it's being captured incorrectly, hasn't been pressed down enough, and so that everything on the left hand Side.
好的，就像平板扫描。这就是问题所在，因为这意味着它被错误地捕获了，没有被足够地压下去，所以左边的所有东西。

01:06:31
Has been drawn upwards. So if I go back to this, you can see that this is true. So everything on the left hand side of the image is being pulled upwards.
被向上拉。如果我回到这里，你可以看到这是真的。所以图像左边的所有东西都向上拉。

01:06:40
And so all of the text is kind of running diagonally top left, down to bottom right. And here's the example. This is why we're done.
所有的文字都是对角线从左上到右下。这里有个例子。这就是我们结束的原

因。

01:06:50
Because OCL software is trained so that for horizontal, straight lines going left or right.
因为OCL软件是经过训练的，所以对于水平的直线，向左或向右。

01:06:57
And this, it hasn't found, it's got diagonal. And this is the problem. This is why this ocr is so bad. Okay. Now I'm going to tell you what.
而这个，它没有找到，它是对角线。这就是问题所在。这就是为什么这段视频如此糟糕。好吧。现在我要告诉你。

01:07:07
Do with this OCR later. Because often, once you've found those bad OCR, the next question is, well, what can I do with that? But for the moment, it's just enough to understand that OCR is not a perfect process.
稍后再处理这个OCR。因为通常，一旦你发现了那些不好的OCR，下一个问题是，我能做些什么？但就目前而言，理解OCR不是一个完美的过程就足够了。

01:07:18
Okay. Gale is as good as it gets at creating acura ocr.
好吧。Gale在创造acura ocr方面做得很好。

01:07:24
In databases, in digital archives, at the scale that we're doing, okay. So when we're talking about millions and millions of documents, nobody does it, by the way, down.
在数据库中，在数字档案中，以我们正在做的规模，好的。所以当我们谈论数以百万计的文件时，顺便说一下，没有人会这么做。

01:07:36
And I know that because we do a lot of testing, a lot of checking to make sure that with a being as accurate as we can be, and that we're

benchmarking against, you know, other competitors, either commercial competitors, or people like Google or.
我知道，因为我们做了很多测试，很多检查，以确保我们尽可能准确，我们对基准，你知道，其他竞争对手，无论是商业竞争对手，还是像b谷歌这样的人。

01:07:50
Or whatever, we make sure that we're doing it as good as we're doing it as we can be doing it. There are plenty of people who do it as well as we do, or nearly as well as we do, but nobody does it better.
不管怎样，我们都要确保我们把它做得尽可能好。有很多人做得和我们一样好，或者几乎和我们一样好，但没有人做得更好。

01:08:01
So that's the first thing to say. The second thing to say is we are not close to perfect.
这是首先要说的。第二件要说的是，我们离完美还很遥远。

01:08:06
Okay. Gale is not close to perfect. Gale's OCR is depending on the database you're looking at.
好吧。盖尔并不完美。盖尔的OCR取决于你正在查看的数据库。

01:08:18
And bear in mind that older databases, older collections are going to be less accurate than newer databases.
记住，旧的数据库，旧的集合会比新数据库更不准确。

01:08:26
Newer connections, simply because the source material is just more accurate, okay? Or it's just more clear, and therefore you're able to get better until but also because.
更新的联系，仅仅是因为原始材料更准确，明白吗？或者它只是更清晰，因此你能够变得更好，直到但也因为。

01:08:37
Imaging has got better. Camera technologies got better. OCR software's got better over time, right? So newer stuff is likely to be.
成像技术已经变得更好了。摄像技术得到了改进。随着时间的推移，OCR软件越来越好了，对吧？所以更新的东西很可能是。

01:08:46
More accurate. But if you wanted my guess, and it is only a sense, but we use sampling to make an educated guess. Today, also, cr activity is anything between 85 % accurate and 95.
更准确。但如果你想要我的猜测，这只是一种感觉，但我们用抽样来做一个有根据的猜测。今天，cr的准确率也在85%到95%之间。

01:09:00
Depending on the collection, which means that anywhere between 85 and a hundred and 95 that 100 letter dollar page.
这取决于收藏，也就是说在85到100和95之间的任何地方，100字母美元的页面。

01:09:08
By, captured correctly. Okay, also put it another way, anyway, it's between five and 15 letters on a page out of a hundred.
通过，正确捕获。好吧，换一种说法，不管怎样，它在一百页纸上有五到十五个字母。

01:09:16
Related on page are actually incorrect.
页面上的相关信息实际上是不正确的。

01:09:19
Okay, so just sit with the implications of that.
好吧，你就静下心来想想这句话的含义吧。

01:09:24
Okay. If you're searching through any large scale of digital archive from us,

from commercial partners, from commercial competitors, from?
好吧。如果你正在搜索任何大规模的数字档案来自我们，来自商业合作伙伴，来自商业竞争对手，来自?

01:09:35
Open sources like Google or Happy Trust, there is a very good chance that the material that you're looking at has been captured in perfect.
像谷歌或Happy Trust这样的开放资源，很有可能你正在看的材料已经被完美地捕获了。

01:09:46
And that's somewhere between five and 50 of every hundred letters on the page are captured incorrectly.
也就是说，每100个字母中有5到50个被错误地捕捉到了。

01:09:55
And that affects the searching you do, because that's what you're searching is imperfect.
这会影响你的搜索，因为你搜索的东西是不完美的。

01:10:01
Documents, these imperfect data. OCR Okay, so I don't want to scale, but that's why.
文件，这些不完善的数据。好的，我不想缩放，但这就是原因。

01:10:11
Is really important. And critically.
真的很重要。和批判性。

01:10:13
Or to think critically about these databases, to not just assume that when I type in a word and take search, it's going to follow me every.
或者批判性地思考这些数据库，而不是假设当我输入一个单词并进行搜索时，它会跟随我每一次。

01:10:24
Reference for that word. It may not, it may miss references to that word because the OCR has been captured incorrectly, and it doesn't refer to what.
参考这个词。它可能不会，它可能会错过对那个词的引用，因为OCR被错误地捕获了，它没有引用什么。

01:10:36
You think it should refer to. So you need to be smart when you're searching. You be critical when you're thinking about.
你认为它应该指。所以你在搜索的时候要聪明。当你思考的时候，你会很挑剔。

01:10:44
Okay, but most of all, you need to understand how these things are built, and this is what we're doing here. Okay, so that's digital article.
好吧，但最重要的是，你需要了解这些东西是如何建造的，这就是我们在这里所做的。好了，这就是数字文章。

01:10:54
That's how they're built. That's what goes on behind the scenes of digital articles. And I'm just going to stop now and just ask, are there any questions at all? Any questions in the room? Any questions online.
这就是它们的构造。这就是数字文章背后发生的事情。现在我要停下来问大家，有什么问题吗？有问题吗？网上有问题吗?

01:11:05
About any of that before we go on.
在我们继续之前。

01:11:10
Okay, so thank you for your sharing. That would be really interesting. I have two questions, one on the accuracy rate. At what point?
好的，谢谢你的分享。那将会非常有趣。我有两个问题，一个是关于准确率。什么时候?

01:11:26
Would you decide to intervene with human correction? No question. That's why. Let me ask that question. Let me ask that question first, and then we'll get a second.
你会决定用人工矫正来干预吗？没有问题。这就是为什么。让我来问这个问题。我先问这个问题，然后再问第二个问题。

01:11:39
Human intervention. We don't intervene too much. Okay, mainly because you don't want to speak.
人工干预。我们不会过多干预。好吧，主要是因为你不想说话。

01:11:47
Also, mainly because it would be just incredibly expensive. And, you know, we have to charge like ten times more for these databases than.
另外，主要是因为它会非常昂贵。而且，你知道，我们对这些数据库的收费要比。

01:11:58
What they already are, the OCR software that we use, and we do a lot of checking is the best out there. We make sure that we're using the very best software.
我们使用的OCR软件，我们做了很多检查，是目前最好的。我们确保使用最好的软件。

01:12:09
For the type of material that we're digitizing. Okay. And bear in mind that different types of materials sometimes need different types of software.
对于我们正在数字化的材料来说。好吧。记住，不同类型的材料有时需要不同类型的软件。

01:12:18
So we're using the very, very best one that we can do. We don't need to think very much in archives for two reasons. One is very expensive.

所以我们用的是我们能做到的最好的。我们不需要在档案中考虑太多，原因有二。一种很贵。

01:12:27
Okay, because.
好的,因为。

01:12:29
It's very difficult when you're talking about millions of pages. It's difficult to identify where there are errors, okay, because we don't go through and read all these things.
当你谈论数百万页的时候，这是非常困难的。很难识别哪里有错误，因为我们不会把所有的东西都看一遍。

01:12:41
We do sampling to make sure that the OCR is as fine tuned and as accurate as it can be. But we can't go through we don't sit down and read.
我们做采样，以确保OCR是微调和准确，因为它可以。但是我们不能通过，我们不能坐下来阅读。

01:12:50
You know, two 3 million pages that would make these things just commercially unviable, like they just wouldn't exist. Okay, so we can't do that. Where we do intervene.
你知道，两到三百万页就能让这些东西在商业上不可行，就像它们根本不存在一样。好吧，我们不能那样做。我们要进行干预。

01:13:02
Or we do check, we do get humans to check. We check on the most searched, most reference part of the document. So we always check.
或者我们检查，我们让人检查。我们检查搜索次数最多，引用次数最多的文档部分。所以我们总是检查。

01:13:11
The title of the document, the author of the doctor, the date of the

document, the publication title of the document. So those are these people search most often. So we have people checking.
文件的标题，医生的作者，文件的日期，文件的出版标题。所以这些是人们最常搜索的。所以我们让人检查。

01:13:22
And essentially that's a two person, well, a three person job where two people check if they agree that the OCR is saying, what the?
本质上，这是一个两个人，嗯，三个人的工作两个人检查他们是否同意OCR说的，什么？

01:13:31
Digitized images saying, then we move past if I disagree, then a third person checks in the next best to our food, and then we correct that stuff. So those bits.
数字化图像说，如果我不同意，我们就跳过，然后第三个人检查我们的食物，然后我们纠正这些东西。这些小块。

01:13:41
Title, author, date, date, publication, are as close to a hundred percent accurate as we can make it, but the text itself.
标题，作者，日期，出版日期，我们能做到的是接近百分之百的准确，但是文字本身。

01:13:51
Those agents, because that would be too expensive. And the other thing to say is that although we're experts in digitalizing these things, we're not experts in what they say.
那些特工，因为那样太贵了。另一件要说的是，尽管我们是数字化这些东西的专家，但我们对它们说什么并不在行。

01:14:01
Okay, you are experts in what they say. You know, we're not, you know, historical experts. We're not, you know, these kind of things. So.
好吧，你对他们说的话很在行。你知道，我们不是，你知道，历史专家。我

们不是，你知道的，这种事。所以。

01:14:11
Sometimes like, and I'm thinking more about things like handwritten text, right where it could be difficult to figure out what that handwritten text actually says.
有时候，我想的更多的是手写的文字，很难弄清楚手写的文字到底在说什么。

01:14:21
Like even when you're reading the handwriting. So we've come to the conclusion, and I think this is true. You don't want us to try and interpret that.
甚至当你在读笔迹的时候。所以我们得出结论，我认为这是真的。你不会想让我们去解释的。

01:14:31
You want to interpret that because you're the historical expert. We're not the historical experts. Okay, so it's not like there's a threshold or anything like that.
你想要解释，因为你是历史专家。我们不是历史专家。好吧，这并不是说有一个阈值之类的东西。

01:14:43
Where we decide to intervene, we don't intervene because, like, we can't check everything that's in there, you know, the way that we come up with, you know, this sort of accuracy 85 to 95 %.
当我们决定干预时，我们不干预，因为，我们不能检查所有的东西，你知道，我们提出的方法，你知道，这种准确率是85%到95%。

01:14:56
It's all based on sampling, where we take like a thousand documents out of the million and sort of do the check there simply because it's too time consuming to do it at the scale that we're talking about.
这都是基于抽样的，我们从一百万份文件中抽取一千份来做检查因为在我们

谈论的规模上做这样的检查太耗时了。

01:15:08
But it's a really, really good question. Thank you for asking it. And what's your second question?
但这是一个非常非常好的问题。谢谢你的提问。你的第二个问题是什么?

01:15:12
The second question, if I may, is about, kind of, well, I wonder if this is a one, off service, or do you have, would you be involved in maintaining the database as well. And.
第二个问题，如果可以的话，是关于，嗯，我想知道这是否是一次性服务，或者你是否也会参与维护数据库。和。

01:15:25
You know, when it goes online, when it goes live, would you be involved in, kind of, what do you call it? Like tracking excess hit rates? And?
你知道，当它上线的时候，当它上线的时候，你会参与其中吗？比如追踪超额命中率？然后呢?

01:15:36
Then, you know, what do those information? Does that feed into, you know, decisions on whether or not to continue to do more or, you know, to just discontinu, digitizing?
然后，你知道，这些信息是什么？这是否会影响到，你知道，决定是继续做更多的事情还是，你知道，只是停止，数字化?

01:15:47
Oh, that's a really good question. I mean, these databases are out. We own them like the times are still hours, you know, it's 25 years old. We still sell it.
哦，这真是个好问题。我是说，这些数据库已经过时了。我们拥有它们，就像时间还是小时一样，你知道，它已经25年了。我们还在卖。

01:15:58

So we have the commercial rights to sell this stuff, that the intellectual property of the images themselves rest with the source library. So, like the Times newspaper owns the images.
所以我们有销售这些东西的商业权利，图像本身的知识产权属于源库。就像《泰晤士报》拥有这些图片一样。

01:16:11
That we digitize, but we own the digital, the digital collection. We still sell it, we update it, we add more content when more content exists.
我们将其数字化，但我们拥有数字化的，数字化的收藏。我们仍然会出售它，更新它，当有更多内容存在时，我们会添加更多内容。

01:16:21
For something like the Times. That might be, we might have it, you know, five years on, or something like that, and we maintain them, so, which is an expensive thing, right? You know, we maintain the service. We update the platform and the database. You know, the UX, the UI.
像《泰晤士报》这样的报纸。这可能是，我们可能有它，你知道，5年了，或者类似的，我们维护它们，这是一件很昂贵的事情，对吧？你知道，我们维护服务。我们更新了平台和数据库。你知道，UX， UI。

01:16:36
And all of that sort of thing, and we set it to and maintain it, and we track the usage and all of that kind of thing. And that's a really, really, really great question, because we do check.
诸如此类的事情，我们设置并维护它，我们跟踪它的使用情况，诸如此类的事情。这是一个非常非常非常好的问题，因为我们确实检查过。

01:16:48
To see what people are searching for, what they're searching for, and we use that to make those decisions about what we might digitize later, like if people are.
看看人们在搜索什么，他们在搜索什么，然后我们用它来决定我们以后可能会数字化的东西，就像人们。

01:16:59
You know, doing loads of searches for, I don't know, china within newspapers, then it might be like, okay, we've got a real interest here.
你知道，我在报纸上搜索了很多关于中国的信息，然后它可能会说，好吧，我们对这里很感兴趣。

01:17:09
And people want to be searching So, or if people in China are doing lots of searching for these kind of things, it might be right. We need to digitize more of these kind of things.
人们想要搜索，或者如果中国的人们正在做很多搜索，这可能是对的。我们需要把更多这类东西数字化。

01:17:18
For the Chinese market, or we might need to find, I don't know, chinese newspapers that we can digitize. So great question. And we do that a lot.
为了中国市场，或者我们可能需要找到，我不知道，我们可以数字化的中国报纸。问得好。我们经常这样做。

01:17:29
Any other, any other questions.
还有其他问题吗?

01:17:32
I had a question. You mentioned that, I guess, kind of, data kind of informs what items you are archiving. I'm curious to know if there's also, like, a qualitative aspect towards this, maybe, like.
我有个问题。你提到过，我猜，数据告诉你要归档的项目。我很想知道，是否也有一个定性的方面，也许。

01:17:46
Are there, like, experts within your teams that, like, kind of, have an opinion about what to sort of, archive? Or is it more of a, kind of just a data driven Decision.
你的团队里有没有专家对要归档的东西有什么意见？或者它更像是一种数据

驱动的决策。

01:17:55
Oh, that's a really good question. Um.
哦，这真是个好问题。嗯。

01:17:58
Okay. So the answer is it's sort of a bit of both. It's kind of an art and kind of a science. Okay. So.
好吧。所以答案是两者都有。这是一门艺术，也是一门科学。好吧。所以。

01:18:09
The most, the most important thing in terms of.
最重要的是。

01:18:15
In terms of, in terms of what the digital is, is, what does the market have? And that means.
就数字化而言，市场上有什么？这意味着。

01:18:23
And this is why I have my job, right? It's about making connections with institutions, you know, with your library, with your faculty, with.
所以我才有了这份工作，对吧？它是关于与机构建立联系，你知道，与你的图书馆，与你的教员，与。

01:18:33
To you to understand what you're using, what courses are being developed, what research is being done. And I work with loads of researchers to support research, so I know kind of what's coming as well.
让你了解你在用什么，正在开发什么课程，正在做什么研究。我和很多研究人员一起工作来支持研究，所以我也知道会发生什么。

01:18:46
Because, you know, we want to be able to meet a need, not now, but in you

know, the stuff we're creating now is about meeting a need in four or five years time, right? So.
因为，你知道，我们想要能够满足需求，不是现在，但是你知道，我们现在创造的东西是为了满足四到五年后的需求，对吧？所以。

01:18:57
The only way to understand that is to really be able to understand the academics and to understand the universities that we work with. So that's the important.
理解这一点的唯一方法是真正能够理解学术和我们合作的大学。这很重要。

01:19:07
From an editorial perspective, obviously, they really need to understand the source language as well. You know what they want.
从编辑的角度来看，很明显，他们也需要理解源语言。你知道他们想要什么。

01:19:15
Hasn't been digitized and things like that. But there is definitely a qualitative, a sort of quantitative aspect as well, where we're doing that data analysis.
还没有被数字化之类的东西。但我们在做数据分析时，肯定也有定性的，定量的方面。

01:19:25
Not just of, you know, courses that are being developed and things like that, but of, you know, how people are using our archives and other archives as well.
不仅仅是，你知道，正在开发的课程和诸如此类的东西，而是，你知道，人们如何使用我们的档案和其他档案。

01:19:36
You know, we'll look at what competitors are doing. We'll look at, you know, google Analytics and things like that. We'll look at what people are doing on our website.

你知道，我们会看看竞争对手在做什么。我们会看看谷歌Analytics之类的东西。我们会看看人们在我们的网站上做什么。

01:19:46
You know, what is the most popular pages on there? And all of that sort of thing helps video data that fits into this. So.
你知道，最受欢迎的页面是什么吗？所有这些都有助于视频数据的整合。所以。

01:19:55
A bit of art, because, you know, you've still got to, you'll still kind of create something creative out of nothing, I suppose.
一点艺术，因为，你知道，你仍然需要，你仍然会创造出一些有创意的东西，我想。

01:20:04
A lot of science, but the most important relationship.
科学很多，但关系最重要。

01:20:09
Is the one with the customers, which is, which is the academics and the universities. So that we're giving you what you want.
是有客户的，也就是学术界和大学。这样我们就能满足你的要求。

01:20:19
And not what we think you want. That is, that's death for any country. You know, give the customer what they want always, I think.
而不是我们认为你想要的。也就是说，这对任何国家来说都是死亡。你知道，我认为，总是给顾客他们想要的。

01:20:28
Great question. Thank you. Was that one other question? Yes, this one other thing? Hopefully, I just wanted to chat right away.
好问题。谢谢你！这是另一个问题吗？是的，还有一件事吗？希望，我只是想马上聊聊。

01:20:36
Sorry. I just want to answer my question. Oh, brilliant. There's one in the chat. I wasn't there. I can answer it.
对不起。我只想回答我的问题。哦,好。聊天里有一个。我不在场。我可以回答。

01:20:47
Grill. Can I share that gale's collections Mansion system of digital sources, metadata. Is there a one, size fits all temper at the fields? It does. It vary for the relevant source Library.
烤架。我能分享一下盖尔的收藏吗豪宅系统的数字资源，元数据。有没有一种适合所有人的脾气？它的功能。它因相关的源库而异。

01:20:58
Or super question. Okay. So we have, as you would expect this, again, we spoke.
或者超级问题。好吧。所以，正如你们所料，我们再次进行了对话。

01:21:05
Data management system that we use. There is, it isn't for one size fits all company. There are several.
我们使用的数据管理系统。这不是一个适合所有公司的方法。有几个。

01:21:17
Like fields, where there is one thing, okay, so things like, I don't know, let's say, publication, title.
比如字段，这里只有一个东西，比如，出版物，标题。

01:21:26
Author date, that sort of thing. And there should be, because one of the things I'm going to show you a little bit later, In fact, we're going to see, when we look at the lab, is that?
作者日期之类的。应该有，因为我稍后会给你们展示的东西之一，事实上，我们会看到，当我们看实验室的时候，是这样的吗？

01:21:37
We've got cross searches. We've got things where you have the ability to search across different types of data. And in order to do that, you need to have some fields that are in common.
我们有交叉搜索。我们有一些东西，你有能力搜索不同类型的数据。为了做到这一点，你需要有一些共同的字段。

01:21:49
Right? So if I search for title, I needed to bring up newspapers and books and letters and manuscripts and monographs and all of these kind of things that are very, very Different.
对吧?所以如果我搜索标题，我需要找到报纸、书籍、信件、手稿和专著，以及所有这些非常非常不同的东西。

01:22:00
I want to be able to sort of search across them, but there are other types of meta data that are specific, and there will be bespoke for each one. So.
我希望能够在它们之间进行搜索，但还有其他类型的元数据是特定的，每一种都会有定制的。所以。

01:22:12
Let's think, what, what can I do for that one? So something like a monograph might have, we might have something like a monograph size.
我们想想，我能做些什么呢？所以像专著这样的东西，我们可能会有专著的大小。

01:22:24
Because, you know, a researcher might be really interested to know if a book is like this book or if it's like this book. and you can see kind of gesturing, but, you know, a small one or a big one, because that makes a really big difference to what they're doing. now, that's not relevant.
因为，你知道，研究人员可能真的很想知道一本书是否像这本书，或者它是否像这本书。你可以看到一些手势，但是，你知道，一个小的或一个大的，因为这对他们所做的事情有很大的不同。现在，这无关紧要。

01:22:40
Talk for newspapers, or particularly for newspapers or for letters, but it is relevant for monographs. So we have that as metadata for monographs, but we don't have it.
为报纸说话，特别是为报纸或信件说话，但这与专著有关。所以我们有它作为专著的元数据，但我们没有。

01:22:48
For letters. And, you know, cross searches that we have will be kind of lowest, common in the data, right? They will be searching across.
为字母。你知道，交叉搜索在数据中是最低的，最常见的，对吧？他们将在对岸搜寻。

01:22:58
All the meta data that is in common for all the varied things, but because you've got individual databases as well, those are calibrated and created specifically for types of data.
所有的元数据对于所有不同的东西都是通用的，但是因为你也有单独的数据库，这些数据库是专门为不同类型的数据校准和创建的。

01:23:11
So one that is good for monographs will have all the data points that you need metadata points to search through for monographs. One that's for newspapers.
所以一个对专著有好处的会有你需要的所有数据点元数据点来搜索专著。一个是报纸。

01:23:21
That'll have all the meta data points for newspapers, basically. But not a great question. Any last questions in the room. These are fascinating. I feel like we're going to be talking to the rest of the.
它基本上会有报纸的所有元数据点。但这不是一个好问题。还有问题吗？这些都很迷人。我觉得我们得跟其他的。

01:23:31
Last question. We've got one by the Hi, chris. You can't see me, but dinner share. I just wanted to double click on the metadata question that was posted in the chat. So what type of universal standards do you use? Is like Dublin?
最后一个问题。我们有一个在嗨，克里斯。你不能见我，但要分享晚餐。我只是想双击聊天中发布的元数据问题。那么你使用的是哪种通用标准呢？像都柏林吗？

01:23:47
Doublin Core, E.G., arrived by that one. Is there anything else that you can share and maybe not take into consideration the bespoke solutions that you also have?
例如，双星核心号就是从那一个到达的。你还有什么可以分享的，也许没有考虑到你也有定制的解决方案？

01:23:56
I mean, it's our so we don't use standards, because it's actually we set standards, plus, like what we like.
我的意思是，我们不使用标准，因为实际上我们设定了标准，加上我们喜欢的东西。

01:24:05
The important thing is that the metadata kind of works for us. So it's kind of gale's own, you know, bespoke, sort of schema.
重要的是元数据对我们有用。所以这是盖尔自己的，你知道，定制的，一种图式。

01:24:16
I suppose, because the most important thing is that it works for the stuff that we are creating in And the most important thing is that.
我想，因为最重要的是它适用于我们正在创造的东西最重要的是。

01:24:25
It makes the collections that we're creating discoverable, and where we

can we try and map that to understand its next topic, or where that one.
它使我们正在创建的集合可以被发现，我们可以尝试映射它来理解它的下一个主题，或者在哪里。

01:24:36
But, you know, your research purpose isn't if you.
但是，你知道，你的研究目的不是。

01:24:39
We're using this for research. What we'll do is we share.
我们用它来做研究。我们要做的就是分享。

01:24:42
Share all of the metadata schema with them, and indeed, various mappings as well. There are mappings to do standards so, but.
与它们共享所有的元数据模式，以及各种映射。有做标准的映射，但是。

01:24:52
That's the way you're doing it. Because, kind of, like I said, we're the kind of group. We set the same for these sort of things. That's a really interesting.
你就是这么做的。因为，就像我说的，我们是那种组合。我们为这些东西设置了相同的值。这真的很有趣。

01:25:01
Very important thing, also brilliant. Thank you for your questions. Guys. This is so great. I mean, you love talking to this class. Okay. I am running behind.
很重要的事情，也很精彩。谢谢你的问题。人。这太棒了。我是说，你喜欢和同学们聊天。好吧。我在后面跑。

01:25:11
So I'm going to sort of skim through a few things, and we're going to have probably a bit short time for our exercise, but that's absolutely fine, because I kind of want to jump on to the next bit.

所以我要略过一些东西，我们的练习时间可能会有点短，但这绝对没问题，因为我有点想跳到下一个部分。

01:25:22
Which is text and data mining. Because now we've been talking about data OCR, I want to sort of talk about some of the ways that we might use it.
也就是文本和数据挖掘。因为现在我们一直在讨论数据OCR，我想谈谈我们可能使用它的一些方法。

01:25:31
And I wanted to sort of show a basic text mining process to begin, because digitally humanities is a great thing and an incredibly important and being studied, and you see courses being set up all over the place.
我想展示一个基本的文本挖掘过程的开始，因为数字人文学科是一个伟大的东西，一个非常重要的研究领域，你可以看到各地都开设了相关课程。

01:25:46
And it covers a wide range of humanities. Okay? It covers a video and audio. It covers virtual reality and augmented reality and all sorts of incredibly fun things.
它涵盖了广泛的人文学科。好吧?它包括视频和音频。它涵盖了虚拟现实和增强现实以及各种令人难以置信的有趣的东西。

01:25:59
And we don't do anything to do with those, but what we do cover, what we do support is by part of the biggest part of digital Earth.
我们不做任何与这些有关的事情，但我们所做的，我们所支持的是数字地球的最大一部分。

01:26:06
And that is this text, mind law, text and data mining all the same.
这就是文本，思维法，文本和数据挖掘都是一样的。

01:26:11
Stuff that you can do with things that can be expressed in textual format.

So it doesn't know where it comes from. It could be a, you know, an eleventh century French royal Act. It could be a tweet.
你可以用文本形式表达的东西来做的事情。所以它不知道它是从哪里来的。这可能是11世纪法国皇室的法案。可能是一条推特。

01:26:23
Okay, it could be something you've scraped off read as long as it can be expressed as text, then you can combine it without text, that you can analyse it or min it, in this case.
好的，它可以是你从上面刮下来的东西只要它可以被表示为文本，然后你可以在没有文本的情况下组合它，你可以分析它，或者在这种情况下记录它。

01:26:33
So I'm just going to show you a really basic work rather than that, that begins with this with us, because to this point we talk, this is a primary source. This is a very.
所以我要给你们看一个非常基础的工作，而不是那个，它从我们开始，因为到目前为止，我们谈论的是一个主要的来源。这是一个非常。

01:26:43
Video talk also a depiction of a radio talk on family planning in the 1930s. And as we've seen, sitting underneath that ocr, that's what makes it all texturable. And.
视频谈话还描述了20世纪30年代关于计划生育的广播谈话。正如我们所看到的，坐在ocr下面，这就是使它具有纹理的原因。和。

01:26:54
I don't think I make things clear. You can download both these things from within. If you find this within one of our archives, You can download both these things. I can click, download and get two options, PDF.
我想我没有说清楚。你可以从内部下载这两个东西。如果你在我们的档案里找到这个，你可以下载这两个东西。我可以点击下载，得到两个选项，PDF。

01:27:04
Or download the image, and you can use that in your essay, or use that.

However, you want to use that, download the OCR will give you this.
或者下载图片，你可以在你的论文中使用它，或者使用它。然而，你想使用它，下载OCR会给你这个。

01:27:12
Okay, so there's raw Ocior text, and this is important because when you've downloaded it, you can do things with it. I plug mine into a freely available piece of software called Buoyant.
这是原始Ocior文本，这很重要，因为当你下载了它，你可以用它做事情。我把我的手机插到一个免费的软件里，这个软件叫做Buoyant。

01:27:23
And that allows me to create a statistical output, in this case, the most commonly occurring words within my document.
这允许我创建一个统计输出，在本例中，是我的文档中最常出现的单词。

01:27:31
Okay, and then I can visualize that if I want to. So if you write word clouds, but this is quite effective because it allows me to tell you that this original Document.
好的，如果我想的话，我可以把它形象化。所以如果你写单词云，但这是非常有效的，因为它可以让我告诉你，这个原始文档。

01:27:43
Is about birth control and children's health and families and mothers. Okay. And this is interesting because it means that you need never, even of what you need, never read.
是关于生育控制，儿童健康，家庭和母亲的。好吧。这很有趣，因为这意味着你不需要，即使是你需要的东西，也不需要阅读。

01:27:54
The original document. In fact, you would never have even seen the original document, and now have a sense of what it's about. Okay? This is what takes minding happening.
原始文件。事实上，你甚至不会看到原始文件，现在有一个关于它的感觉。

好吧?这需要思想的发生。

01:28:04
And digital humanities can give you. It gives you new ways of looking at your subject, new lenses.
数字人文可以给你。它给你新的视角，新的镜头。

01:28:11
To make discoveries within your data. Okay. And this is why I think it's so exciting, and this is a time when we see sort of global humanities courses going down and down and down in number.
在你的数据中有所发现。好吧。这就是为什么我认为这是令人兴奋的，这是一个我们看到全球人文学科课程数量不断减少的时代。

01:28:24
We say digital is only going up because this is seen as ways of kind of making new.
我们说数字化只是在上升，因为它被视为一种创造新事物的方式。

01:28:34
Discoveries, ways of exploring in ways that would have just been impossible to us even ten years ago. Okay, so really shaking up.
发现，探索的方式这些方式在十年前对我们来说是不可能的。好吧，真的很震撼。

01:28:44
The paradigm of nationalities, and hopefully doing things with all certainly being able to enhance.
民族的典范，希望与所有人一起做事一定能够加强。

01:28:51
And that's where I think it gets really excited. But it comes with challenges. One of the challenges is this just the challenge of scape. Okay, if you're downloading data.
我认为这才是真正令人兴奋的地方。但这也带来了挑战。其中的一个挑战就

是逃避的挑战。如果你在下载数据。

01:29:04
Out of our databases, one by one by one. That's fine for five documents or ten documents. Okay, it's going to take you 5 min, 10 min, something like that. But what if you want a hundred documents.
从我们的数据库中，一个接一个。5个文件或10个文件都可以。好了，大概需要5分钟，10分钟，差不多。但是如果你想要一百份文件呢?

01:29:15
Or a thousand documents, or 10000 documents, okay, I promise you. Because I've done it, it gets boring, really, really, really quickly. Just download it one by one by one.
或者一千份文件，或者一万份文件，我保证。因为我已经做过了，很快就会变得很无聊。一个接一个地下载。

01:29:25
So back about twelve years ago, we started releasing or making available the underlying data from our digital articles, so that OCR and that better data.
所以回到大约12年前，我们开始发布或提供我们的数字文章的基础数据，这样OCR和更好的数据。

01:29:38
And the images on text mining drawings that people could buy, and that means that they could kind of sort of analyze this stuff or at least try and capture this stuff.
人们可以购买文本挖掘图上的图像，这意味着他们可以分析这些东西或者至少试着捕捉这些东西。

01:29:49
So you one example at the University of Dots on the British.
举个例子，在英国的Dots大学。

01:30:01

Okay, was interesting, was it?
好吧，很有趣，对吧?

01:30:09
So what was to analyse, what was it positive?
所以要分析什么，它有什么积极的地方?

01:30:22
And that was the first.
这是第一次。

01:30:26
And I think I talked you about, because this was at a time when we weren't making this data ready. And cap and their phd supervisor came to us.
我想我跟你们说过，因为当时我们还没有准备好这些数据。cap和他们的博士生导师来找我们。

01:30:37
And sort of said, look, can we get access to about seven years at the Times newspaper specifically? Okay, why? Because the reason is because medical is required for that.
他说，看，我们能不能拿到《纽约时报》七年来的具体资料？好的,为什么?因为这需要医学治疗。

01:30:49
They're the commentary. You know, if I want to know how people thought about a certain subject or whatever, editorials is a really good place.
它们是评论。你知道，如果我想知道人们对某一主题的看法，社论是一个很好的地方。

01:31:00
For me to go. You know, it's not the news. It's not telling me what happened. It's, it's opinion. It's telling me, you know, potentially, what the public is about.
我要走了。你知道，这不是新闻。它没有告诉我发生了什么。这是一种观

点。它告诉我，你知道，潜在地，公众在关注什么。

01:31:11
And.
和。

01:31:13
We do want to do this and figure out how we were going to do it technically right, how we're going to download people. So two months just to get access to the data.
我们确实想做这件事，并弄清楚我们将如何在技术上正确地做到这一点，我们将如何下载人员。两个月就为了拿到数据。

01:31:32
Event.
事件。

01:31:34
You get the whole.
你得到了全部。

01:32:00
This A, but also B, because I promise you, there are digital humanities researchers doing research in this way today.
这是第一，但也是第二，因为我向你保证，今天有数字人文学者在用这种方式做研究。

01:32:39
In 2026. They're not, you know, going problematically. They're not using algorithms. They are just copying and pasting bits of data into new databases. And I know.
在2026年。你知道，他们不会有问题。他们没有使用算法。他们只是复制和粘贴数据到新的数据库中。我知道。

01:32:49

Because I've go to a lot of phd conferences. In fact, I'm going to one late this afternoon, and I hear people talk about it taking months, if not years, to just bring data together, what we call the data Random protest, bringing that data together.
因为我参加过很多博士会议。事实上，今天下午晚些时候我要去参加一个，我听到人们说要花几个月，甚至几年的时间，才能把数据收集起来，我们称之为数据随机抗议，把数据收集起来。

01:33:04
From different sources and making it available, or making it, putting it into the right shape to analyze it.
从不同的来源，并使其可用，或者把它放在正确的形状来分析它。

01:33:11
Okay, months, if not years. And every time I hear that, it blows my mind. Okay? But anyway, here we go. And I'm going to show you in a bit how I think we can shrink that process down.
好吧，就算不是几年，也得几个月。每次听到这句话，我都很震惊。好吧?不管怎样，我们开始吧。我将向你们展示我认为我们如何缩短这个过程。

01:33:22
But this is what kept it six months. And then, when they found references to suffragettes or suffragism or suffragists there in column number one.
但正是这个让它保持了六个月。然后，当他们在第一栏找到妇女参政论者或妇女参政主义或妇女参政论者的参考资料时。

01:33:31
They also found words in common, three that were close to the attributes, near to those words. And this is what they analyzed for sentiments. And you can see in this list Already.
他们还发现了一些共同的词，三个接近属性的词，接近这些词。这是他们分析的情绪。你可以从这个列表中看到。

01:33:42
An awful lot of negativity there. You know, militant bombs breakers

opposing suspected outrage disorder, conspiracy, lots of negativity.
那里有很多负面的东西。你知道，激进的拆弹者反对可疑的暴行混乱，阴谋，大量的消极情绪。

01:33:52
Within there. And this was their phd. This is why phds take a long time. Okay, so this was to show you that, but I also want to sort of talk about Why?
在那里。这是他们的博士学位。这就是为什么博士要花很长时间。好的，这是为了向你们展示这一点，但我也想谈谈为什么?

01:34:04
And just briefly, the first thing I talked about, you know, DH is on the up. There is widespread DH option. It's only going up.
简单地说，我讲的第一件事是，DH在上升。有广泛的DH选择。它只会上升。

01:34:14
As I've said, it's about giving you new perspectives on sometimes very, very, very old scholarship and very, very old subjects. So being able to look at these things during the events is an incredibly exciting thing.
就像我说过的，它给了你新的视角去看待一些非常，非常，非常古老的学术和非常，非常古老的主题。所以能够在活动期间看到这些东西是一件非常令人兴奋的事情。

01:34:27
And crucially, for you, from a sort of career's perspective, it's about developing, working with Indigenous communities, about developing transferable skills.
最重要的是，对你来说，从职业的角度来看，这是关于发展，与土著社区合作，关于发展可转移的技能。

01:34:37
You know, skills that you are able to point to on your cv to say, you know, I have the ability, by working with the PH, you know, to work in ad, I have the ability to work in data analysis to tell stories of data.

你知道，你可以在你的简历上指出，你知道，我有能力，通过与PH合作，你知道，在广告中工作，我有能力从事数据分析，讲述数据的故事。

01:34:51
And all of that sort of thing, which is really, really great for you. And, I mean, this is a sort of visual I quite like, and it's talking about.
诸如此类的事情，对你来说真的非常非常好。我的意思是，这是一种我很喜欢的视觉效果，它在谈论。

01:35:00
The value to you of being able to bring together narrative that, you know, you might used to from a kind of history perspective, along with data and the visual to come with it.
对你来说，能够把叙述结合起来的价值，你知道，你可能习惯了从历史的角度来看，还有数据和视觉。

01:35:11
To not only explain a subject, but to engage your reader within that subject and to enlighten them, because we can sort of use these things there.
不仅要解释一个主题，还要让读者参与其中，启发他们，因为我们可以在那里使用这些东西。

01:35:22
And just to sort of have, at this point home about why you should care. This is some data from the World Economic Foreign Jobs Report.
在这一点上，只是想让大家明白为什么要关心。这是一些来自世界经济外国就业报告的数据。

01:35:33
That a lot of the skills that we develop with indigent humanities are on the rise in terms of what work with early so in terms of what employeeers are looking for.
我们与贫困的人文学科一起培养的很多技能都在上升，就早期工作而言，就雇主所寻找的而言。

01:35:43
So what are companies looking for? They're looking for workers who are skilled in creative thinking and analytical thinking, technology and literacy systems, thinking.
那么，企业在寻找什么呢？他们需要的是善于创造性思维和分析思维、技术和读写系统、思维的工人。

01:35:53
AI and group data. But you can also see in there elements of the humanities, creative thinking, curiosity, lifelong learning, flexibility and agility.
人工智能和分组数据。但你也可以在他们身上看到人文的元素，创造性思维，好奇心，终身学习，灵活性和敏捷性。

01:36:05
Critical thinking, all things that we develop within the humanities and within history. So I think you are perfectly positioned here at the intersection.
批判性思维，我们在人文学科和历史中发展的所有东西。所以我认为你在十字路口的位置很好。

01:36:15
Of kind of technology and the humanities to be developing skills that absolutely position you.
是一种技术和人文学科来发展绝对适合你的技能。

01:36:24
Success in the future. Anyway, let's talk about mindset, because working in this area, I think it's really important you develop.
成功在未来。不管怎样，我们来谈谈心态，因为在这个领域工作，我认为培养心态非常重要。

01:36:35
What I think is the kind of correct mindset, and this is really about being able to jump what I think is the biggest case within digital humanities, and that is where you come.

我认为这是一种正确的心态，这真的是关于能够跳过我认为是数字人文学科中最大的案例，这就是你来的地方。

01:36:46
Maybe from a humanity study, and he started research question.
也许是一项人类研究，他开始研究这个问题。

01:36:51
And where you need to get to is a series of sort of experimental steps. So you can see, I'm starting to think, start to talk in the language of science and Experiments.
你需要做的是一系列的实验步骤。所以你可以看到，我开始思考，开始用科学和实验的语言来谈论。

01:37:02
Okay, how do I develop a methodology within my chosen platform? In in my case, I'm going to be talking to you about Dale Digital Scholar Lab. That's the lab that I'm talking about here. How do I develop a kind of?
好吧，我该如何在我选择的平台中开发一种方法呢？就我而言，我将和你们谈谈戴尔数字学者实验室。这就是我在这里说的实验室。我如何培养一种?

01:37:14
Iterative methodology that allows me to answer my humanity's research question. That's your really big jump over there.
迭代方法让我能够回答人类的研究问题。这是你真正的飞跃。

01:37:23
And so it's all about developing an experimental mindset and starting to think back to your.
所以这一切都是关于培养一种实验心态并开始回想你的。

01:37:30
Science classes, which I'm sure you thought that you left longer, and thinking about methodologies and results and iteration and all of this kind of thing, I promise you.

科学课，我肯定你们认为你们离开的时间更长，思考方法，结果，迭代等等，我向你们保证。

01:37:40
It's not as horrible as it sounds if you were allowed to leave chemistry and biology behind. A few things to talk about here, and hopefully this really backs up what Natas was talking to you about before.
如果你被允许放弃化学和生物，这并不像听起来那么可怕。这里有几件事要谈，希望这能支持Natas之前跟你说的。

01:37:51
This is what I want you to start thinking about as you go to do the.
这是我想让你们在做。

01:37:58
The exercise that we're going to do after our little break. And as you start thinking about your projects, these are the important steps of any digit humanities experiment. Any digit humanities Project.
我们休息后要做的练习。当你开始思考你的项目时，这些是任何数字人文实验的重要步骤。任何数字人文项目。

01:38:11
From my perspective. The first is the plan. And I don't mean at this point that you need, you know, pages and pages and pages of plan.
在我看来。首先是计划。我并不是说现在你需要一页又一页的计划。

01:38:21
That is completely detailed and that lays out everything that you need. All I'm really talking about here is really going with an idea of.
这是非常详细的，列出了你需要的一切。我在这里真正想说的是一个想法。

01:38:31
What you're looking to answer? What is your research question? Okay, if you go into any talk.
你想回答什么？你的研究问题是什么？好吧，如果你开始谈话。

01:38:37
I just think I'm just going to, I'm just going to go to experiment. I'm just going to go and play around. I'm just going to explore, see what everyone. I promise you, you're going to get lost quickly and very quickly. You'll start, if I think visualizations.
我只是想，我只是想去做实验。我要去玩一玩。我只是想探索一下，看看大家。我向你保证，你很快就会迷路的。你会开始，如果我想可视化。

01:38:51
That don't mean anything, because you've got nothing to anchor them back. If you start with a research question, even if it's really broad, even if it's like, I want to, I want to know about women's suffrage in the latter part of the nineteenth century.
这没有任何意义，因为你没有任何东西可以把它们固定住。如果你从一个研究问题开始，即使它非常广泛，即使它像，我想知道，我想知道19世纪后半叶妇女的选举权。

01:39:04
Okay, like, let's figure out something about that. That's a research question. It's a really broad one, but it's a research question, and that can be enough. Okay, so start with your Plan.
好吧，我们来想个办法。这是一个研究问题。这是一个非常广泛的问题，但这是一个研究问题，这就足够了。好吧，从你的计划开始。

01:39:15
And that might involve, you know, what tools you want to use. And that involves, you know, going what the tools do and how they work, what data you want to use.
这可能涉及到，你知道，你想用什么工具。这涉及到，你知道，这些工具是做什么的，它们是如何工作的，你想使用什么数据。

01:39:23
And that involves, you know, knowing the data and the various different issues with it and why you should be critical about it. This is where we refer

back to what I was just talking about. But as long as you know, that stuff.
这包括，你知道，了解数据和各种不同的问题，以及为什么你应该对它持批评态度。这就是我刚才所说的。但只要你知道，那东西。

01:39:35
And have an idea of it, then you're claiming to be quite loose, but it's okay.
对它有个概念，然后你声称自己很松散，但没关系。

01:39:41
Do that. Come to developing your methodology.
这样做。开始发展你的方法论。

01:39:43
And this is something that is a live and organic process. Okay. You develop this iteratively. Okay.
这是一个活生生的有机过程。好吧。你迭代地开发它。好吧。

01:39:50
So you you make experiments, and you have an experiment, and then you try it, and if it doesn't come out with what you want, you go back to the start. You make a change in your methodology, and you carry on.
所以你做实验，你有一个实验，然后你尝试它，如果它没有得到你想要的结果，你就回到开始。你改变了你的方法，然后继续。

01:40:04
Okay, you keep doing that until you get what you want. So think about working like a scientist with Think about iterating, making incremental changes until you get to what you want.
好吧，你继续这样直到你得到你想要的。想象一下像一个科学家一样工作，想象一下不断迭代，不断改变，直到你得到你想要的。

01:40:17
Then we can.
然后我们就可以。

01:40:21
Really, really, really important.
非常非常非常重要。

01:40:22
Document as you go.
边走边记录。

01:40:24
Isn't that you're doing this? It's about future. You okay? It's about you in the future and being grateful to present, I promise you, a new document as you go.
这不是你在做的吗？这关乎未来。你没事吧?这是关于未来的你，感激现在，我向你保证，你会有一个新的文件。

01:40:36
Future is going to be delighted with presenting. Okay, you don't have to do much my advice. Just document every time you make a choice or a decision.
未来会很高兴看到你的。好吧，你不用太听从我的建议。只要记录下你每次做出的选择或决定。

01:40:46
Or an interpretation, and it doesn't have to be very big, it's just saying, oh, I thought this, or I made, I changed this variable because of this. Okay.
或者一种解释，它不需要很大，它只是说，哦，我认为这个，或者我因为这个改变了这个变量。好吧。

01:40:55
And then what will happen is what two things. One is, if you go away for a week and come back to it, I promise you, you'll forget why you made those Changes.
接下来会发生两件事。一是，如果你离开一个星期再回来，我向你保证，你会忘记你为什么要做这些改变。

01:41:05
Or why you made those choices. So what this is is a record of what you did, and this is why future you will thank you. And the second one is, when you're done, what you've got then is a sort of methodology, all written out.
或者你为什么做出这些选择。所以这就是你所做的记录，这就是未来你会感谢你的原因。第二点是，当你完成后，你得到的是一种方法，都写出来了。

01:41:19
Because all those choices that you make, and that is your methodology. Okay? It's a record of your iteration. So document that you go on machine.
因为你所做的所有选择，这就是你的方法论。好吧?它是你迭代的记录。所以你在机器上的文件。

01:41:29
It interact with what we talked about. Make changes that something isn't right or it doesn't give you what you want. Go back to the beginning. Make a change. Just one change.
它和我们讲过的东西相互作用。做一些不正确的事情，或者没有给你想要的东西。回到开头。做出改变。只有一个变化。

01:41:39
And then run it again, and keep doing that as many times as you like, until you get the results you want. And then follow this. And I think this is the most important step within this.
然后再运行一次，想做多少次就做多少次，直到得到想要的结果。然后按照这个。我认为这是其中最重要的一步。

01:41:49
Humanity, because this is the sort of critical evaluation here, reflect on what you did.
人性，因为这是一种批判性的评价，反思你所做的。

01:41:54
Okay. Reflect on your methodology, reflect on your plan, and reflect on the results that you've got. Essentially, what you're looking to do is you're

looking to answer the question.
好吧。反思你的方法，反思你的计划，反思你得到的结果。本质上，你要做的就是找到问题的答案。

01:42:04
What would I do differently if I had to do all of this again?
如果让我重新来过，我会怎么做?

01:42:08
Okay. You could be that you've done everything right, you've developed your methods, you've integrated, you've done everything right, and you've still not got the results that you wanted or expected.
好吧。你可能每件事都做对了，你开发了你的方法，你整合了，你每件事都做对了，但你仍然没有得到你想要的或预期的结果。

01:42:20
That's fine. Okay. Maybe the date doesn't, maybe you don't have the right technical skills. Maybe you just ran out of time. Okay.
这很好。好吧。也许约会对象没有，也许你没有合适的技术技能。也许你只是没时间了。好吧。

01:42:29
All of that stuff is okay. In my mood, professor, one might disagree with me, but in my mind, I think that's all okay. like, as long as you're reflecting on what you did.
所有这些都是可以的。以我的心情，教授，有人可能不同意我的观点，但在我看来，我认为这没关系。只要你在反思你做过的事。

01:42:39
As long as you're saying, well, why didn't I get what happened?
只要你说，为什么我不知道发生了什么?

01:42:41
Okay, next time, maybe I'm going to use this data, or next time I'm going to try and find a tool that allows me to do this thing, or whatever it is.

好吧，下次，也许我要用这些数据，或者下次我要试着找一个工具来做这件事，或者别的什么。

01:42:52
Okay, but that reflecting is the crucial, critical good that separates us from machines.
好的，但是这种反射是将我们与机器区分开来的关键。

01:42:59
All right, and enables you to kind of really understand and reflect on what you've done and how you might make up the next thing.
它能让你真正理解并反思你所做的以及你如何构建下一个东西。

01:43:05
So nearly at break, but I'm just going to very briefly introduce you to the land and introduce you to what I'm going to be asking you.
快到休息时间了，但我要简单地向你们介绍一下这片土地以及我要问你们的问题。

01:43:17
To do in the exercise when we come back tomorrow break, so that, you know, they're not being thrown into extremely So this is the tool that we're going to be using.
在我们明天休息的时候做练习，这样，你知道，他们就不会被投入到极端中，这就是我们将要使用的工具。

01:43:27
They all digitals all around. It looks.
他们到处都是数字。它的样子。

01:43:30
Works much the same as any other.
工作原理和其他的一样。

01:43:32

It is. So if you're used to using something like the Time Digital Archive or Echo or any of other things, search is worth the same, etc. And I'm going to show you it in just a second.
它是。因此，如果你习惯使用像Time Digital Archive或Echo之类的东西，那么搜索也是一样的。我马上就给你们看。

01:43:44
But before I do, I just want to show you this, which is a busy, old slide, but this is the landwork.
但在此之前，我想给你们看这个，这是一张很老的幻灯片，但这是陆地作业。

01:43:53
I want you to concentrate, first of all, concentrate on the blue boxes, because that is your works. Build a.
我要你们集中注意力，首先，集中注意力在蓝盒子上，因为那是你们的作品。建立一个。

01:44:02
And I'm going to show you that within the lab, you just the same, and underneath that you've got all the various aspects of each of these parts. So in build.
我要向你们展示的是在实验室里，是一样的，在那下面是这些部件的各个方面。所以在建筑中。

01:44:12
You've got refined attributes, and you do that in a bit in the back of the advanced search, then you would evaluate results, which you do in the results page and so on, saying and so forth.
你有了精炼的属性，你在高级搜索的后面做了这个，然后你会评估结果，你在结果页面中做的，等等。

01:44:22
You know, bill can analyze, is a sort of basic text mining work for it's how it works, and it looks linear. But again, remember that this is an iterative

thing. So all the orange arrows, they go back to course as well.
你知道，比尔可以分析，是一种基本的文本挖掘工作，因为它是如何工作的，它看起来是线性的。但是，记住这是一个迭代的过程。所以所有的橙色箭头，它们也回到了原来的方向。

01:44:34
So you can go build straight to hand.
所以你可以直接动手建造。

01:44:37
And then you can go back to clean, and then back to analyze, then back to bill. So don't think of this as linear. Think of this as everywhere. You can see down at the bottom.
然后你可以继续清理，然后继续分析，然后再回到账单上。所以不要认为这是线性的。把它想象成无处不在。你可以在底部看到。

01:44:47
The screen that you can export at every stage. So you can export OCR data for external use if you want to, or you can export the analytical data that you create and the visual.
可以在每个阶段导出的屏幕。所以你可以导出OCR数据供外部使用如果你想的话，或者你可以导出你创建的分析数据和可视化。

01:44:57
Organizations. It's great to go into your projects. You can do all of that stuff easily.
组织。进入你的项目是很好的。你可以很容易地做所有这些事情。

01:45:01
Okay, so all of that's fun, but the last thing that I wanted to point out is the bits on the outside, because that's nothing to do with us, and that's all to do with you. Ideation, interpretation.
好了，所有这些都很有趣，但我想指出的最后一件事是外面的部分，因为那与我们无关，而是与你有关。意念,解释。

01:45:13
Just a hammer at home. The most important parts of this process are Ukraine constructing your research question. Because from that research question, everything else flows.
在家就用锤子。这个过程中最重要的部分是构建你的研究问题。因为从这个研究问题出发，其他的一切都会随之而来。

01:45:24
How you build your content setting between your data and how you animate your data. And then, when it comes to interpreting, that's reflecting on your research question and developing inferences from what you.
如何在数据和数据动画之间构建内容设置。然后，当涉及到解释时，这是对你的研究问题的反思，并从你的研究中得出推论。

01:45:36
You've done okay. So coming up with your conclusions at the end.
你做得很好。最后得出你的结论。

01:45:39
So that's the.
这就是。

01:45:42
There's a little bit rid of that whole working slide. So to the lab, right? I'm actually going to take the break now, and we're going to take 10 min if that's okay. So if you can all come back, I'm not entirely sure what time it is now, but at the top.
这是整个工作幻灯片的一部分。所以去实验室，对吧？我现在要休息一下，如果可以的话，我们要休息10分钟。如果你们都能回来，我不太确定现在是什么时间，但在顶部。

01:45:57
Top of the hour. So for me, it's 1248. So if everyone can come back, after a little comfort break, we're going to get yourself a drink. Come back and.

整点结束。对我来说，是1248。如果大家都能回来休息一下，我们要去喝点东西。回来，然后。

01:46:06
So 01:00 my time, but at the top of the hour for you what we're going to do in the last half hours, I'm going to show you the lab. I'm going to show you.
所以我的时间是1点，但在最后半个小时我们要做的事情的最后一小时，我将带你们参观实验室。我来展示给你们看。

01:46:14
What I'm going to be asking you to do, and then you're going to have a chance to get hands on and actually do a little bit of an activity. Okay.
我要让你们做的事情，然后你们将有机会亲自动手做一些实际的活动。好吧。

01:46:24
But for the moment. Thank you all very much.
但就目前而言。非常感谢大家。

01:46:27
Much less being absolutely brilliant. Go and have a little rest, a little break. Now go and stretch your legs. See you back during 10 min for our final half an hour.
更不用说绝对聪明了。去休息一下，休息一下。现在去伸伸腿。我们最后半小时的10分钟再见。

01:46:37
Thank you all very much.
非常感谢大家。

01:46:41
Great.

01:46:42
Interest.

的兴趣。

01:46:47
So last half hour, I'm just going to give you this sort of really brief tour of the lab so that, you know, where you're going to go.
最后半个小时，我会给你们简单介绍一下实验室，这样你们就知道要去哪里了。

01:46:56
And then explain the task to you, and you maybe have sort of 20 min to just have it explore yourself.
然后向你解释任务，你可能有20分钟的时间来探索自己。

01:47:07
In there. So the first thing I need to do is show you the lab I have. I will put up a link to it that will hopefully take you straight there. I'm going to buy a sort of slightly different way that this is all the Gale products that I have.
在那里。所以我要做的第一件事是向你们展示我的实验室。我会提供一个链接，希望你们能直接找到。我将以一种稍微不同的方式购买这是我所有的盖尔产品。

01:47:22
And within there, I've got Digital Scholar Lab. Hopefully you'll be able to find it in your library, web pages and things like that. Now.
在那里，我有一个数字学者实验室。希望你们能在图书馆，网页之类的地方找到它。现在。

01:47:31
I'm hoping that if you did the free work that was sent out beforehand, that you've all signed in, you created an account within the lab. This is just so that.
我希望如果你们事先做了免费的作业，你们都已经登录了，在实验室里创建了一个账户。这只是为了。

01:47:41

Your research is your own, okay? And it knows that you are coming from n us, but it also knows that you are you. So I am going to look sign in by Google. You don't need a Google account or a Microsoft account for this. You.
你的研究是你自己的，好吗？它知道你来自我们，但它也知道你就是你。所以我要用b谷歌来登录。您不需要谷歌帐户或微软帐户。你。

01:47:56
You can use any You can use your University email account, and that will be fine. And then you'll just click into your personal workspace, which will be there now.
你可以使用任何你可以使用你的大学电子邮件帐户，这很好。然后你只需点击进入你的个人工作区，现在就在那里。

01:48:06
As I said, the workflow is the sort of Build Clean analyse that we can see on the front page, and we can see Build Clean analyse up here on that top.
就像我说的，工作流是我们可以在首页看到的那种Build Clean分析，我们可以在顶部看到Build Clean分析。

01:48:16
In the top menu. So you can always go back to it from up here, bill Key, and analyze at the top the first place that I want to show you go is where we scroll down the window and we look at the learning center.
在顶部菜单中。所以你总是可以从这里回到它，比尔·基，并在顶部分析我想给你看的第一个地方是我们向下滚动窗口，我们看看学习中心。

01:48:28
Now, I'm showing you this for two reasons, one, because this isn't a full trading session on the lab. You know, those can take a long time to really situate you and help you to understand it. So.
现在，我给你们看这个有两个原因，第一，因为这不是一个完整的交易过程。你知道，这些可能需要很长时间才能真正定位你并帮助你理解它。所以。

01:48:40
If you get to the lab and you're thinking, right, I need to learn more about it. This is the place for you. Okay? This will break down how you build content sector. You clean your data.
如果你到了实验室，你会想，对，我需要更多地了解它。这是适合你的地方。好吧?这将分解你如何构建内容部门。你清理你的数据。

01:48:50
How you analyse your data to select the right tools, what the tools are, etc. Etc. But the reason I wanted to show you this today.
如何分析数据以选择正确的工具，工具是什么，等等。等。但我今天给你们看这个的原因是。

01:49:00
Is, it says, good, good. Sorry. I don't remember where this debate is. The reason I want to show you today is what I'm going to be asking you to do.
它说，很好，很好。对不起。我不记得这场辩论在哪里。今天我想给你们展示的是我要求你们做的事情。

01:49:12
Is under, analyze, the analyzes have, I want you to go to Data Service. And the reason for that is what we have in the lab are some prebuilt data sets. Okay, so that you don't have to do that long process that I said.
是下，分析，分析有，我要你去数据服务。原因是我们在实验室里有一些预建的数据集。这样你就不用做我说的那个漫长的过程了。

01:49:26
Took captive for six months to do of kind of bringing your data together. Now, people are your own.
我花了六个月的时间收集你的数据。现在，人是你自己的了。

01:49:33
For your own research. And when you do that, hopefully what the lab will do is stop you having to spend six months to do that process, and it will enable you to do it in.

为了你自己的研究。当你这样做的时候，希望实验室能让你不用花六个月的时间来完成这个过程，它能让你在。

01:49:43
If not weeks, then days, if not days, then hours, to actually just bring data together. So it will take you a little bit of time, but it won't take you forever and ever and ever. But you do want to do that because one of the most important bits of any data enough.
如果不是几周，那就是几天，如果不是几天，那就是几个小时，把数据集中起来。所以它会花费你一点时间，但它不会永远，永远，永远。但你确实想这么做因为任何数据中最重要的一点。

01:49:59
As this project is what data you're actually putting in to the model. So you want to kind of control that. You want to know that what you're creating is your own Thing.
因为这个项目是你实际输入到模型中的数据。所以你想要控制它。你想知道你所创造的是你自己的东西。

01:50:08
But you don't have to do that for this exercise, because we have some pre built data sets available. You're going to be using, I think I'm right in saying.
但你不需要在这个练习中这样做，因为我们有一些预先构建的数据集。你会使用，我想我说的没错。

01:50:18
Where is it? I can't even find it now.
它在哪里？我现在都找不到了。

01:50:24
For some reason it's not there. I don't know why it's not there. Okay? It doesn't really matter. It's one on the other. So, so data set.
由于某种原因，它不在那里。我不知道为什么没有。好吧?这并不重要。这是一个在另一个上。数据集。

01:50:35
So I can see it for the tricks data set six, so you're going to be doing a little bit of a project on a boxer uprising. Okay, so.
所以我可以看到它的技巧数据集六，所以你要做一个关于义和团起义的小项目。好的,所以。

01:50:45
The Chinese uprising against the British. And what we've got here is data set from 1898 to 1907, with a hundred and eleven documents.
中国反抗英国的起义。我们这里有从1898年到1907年的数据集，有111份文件。

01:50:55
In it. And all you're going to do here is you're going to get a topic, okay? And that will download it onto your instance of the lab, and then you can start doing things with it.
在里面。你们要做的就是找到一个主题，明白吗？它会把它下载到你的实验室，然后你就可以开始用它做事情了。

01:51:06
Okay. Now, the first thing that I'm going to ask you to do, if I go back to the top of the screen, is to go to the analyze page.
好吧。现在，我要让你们做的第一件事，如果我回到屏幕顶部，就是进入分析页面。

01:51:12
Because when you go to analyze page, hopefully some, and these are all my So the data sets are what we call content sets. And content sets are just like buckets of content into which you would throw the data that you need.
因为当你去分析页面时，希望有一些，这些都是我的数据集就是我们所说的内容集。内容集就像内容桶，你可以把你需要的数据放入其中。

01:51:26
So if you were building your own data set, you would search within what

we have, or you would upload your own data, and then you would put it all into a content set up to a limit of 10000 documents. Okay, the content set, that means 10000 documents. And here are all the ones.
所以如果你要建立自己的数据集，你可以在我们现有的数据中搜索，或者你可以上传你自己的数据，然后你可以把它们全部放入一个限制为10000个文档的内容设置中。内容集，意思是10000个文档。这些都是。

01:51:41
That I've created. So these are all mines. Your list will be much more than this, and it should probably only have one within it, which will be data set six on the box of uprising, which.
是我创造的。这些都是我的。你的列表会比这多很多，它应该只包含一个，也就是起义框上的数据集6。

01:51:52
I think I've got somewhere, so you would select.
我想我找到了一个地方，所以你可以选择。

01:52:01
And then what you're going to do is you're going to do what I've done here, but let's imagine that you don't. So you're going to start by adding an analysis tool.
然后你要做的是你要做我在这里所做的，但是让我们假设你没有。所以你要从添加一个分析工具开始。

01:52:13
I'm going to ask you to add two tools. You don't need to write this down. I'm going to have instructions for this, by the way.
我将要求你们添加两个工具。你不需要写下来。顺便说一下，我会有关于这个的说明。

01:52:19
The two tools you're going to add are n grams, which you're going to click there, and topic, which you're going to click here. N grams is a tool that basically counts the most frequently occurring words or phrases.

你要添加的两个工具是n克，你要点击这里，和主题，你要点击这里。N grams是一个计算最频繁出现的单词或短语的工具。

01:52:31
Within your documents. And topic modeling is a tool that allows you to create thematic topics out of your data. So really is a way of.
在你的文档中。主题建模是一种工具，它允许您从数据中创建主题。所以真的是一种方式。

01:52:41
Figuring out what your data set is most about. Okay. In terms of the subjects or topics that are within it, I use both of these tools.
弄清楚你的数据集是关于什么的。好吧。就其中的主题或主题而言，我使用这两种工具。

01:52:50
Extensively the beginning of research projects to just kind of give me a sense of the shape of my dating And what about what are the key things?
广泛地说，研究项目的开始只是为了让我对约会的形式有一个感觉，那么关键的事情是什么?

01:52:59
Themes. What should I be looking at within this? And I want you to, I want you to do that here. So we'll do that. Click done, and then all you're going to do.
主题。我应该从这里面看到什么？我想让你，我想让你在这里做。我们来做一下。点击完成，然后你要做的就是。

01:53:09
If you're going to select both of these and you're just going to click Run, selected, or alternatively select the green run button for each of them here, but to say, if you want, click.
如果你要同时选择这两个你只需点击运行，选中，或者选择绿色的运行按钮这里的每一个，如果你想，点击。

01:53:18
Click, run there, and it will have a think about it. It's in progress. And then in a minute or two, these will go green. That will tell.
点击，运行，它会考虑一下。它正在进行中。过一两分钟，这些就会变绿。那就说明了。

01:53:28
That these are done. Okay. So that's sort of the first step. Download your content set from the data set, bit of analyze within the learning center. So from this.
这些都完成了。好吧。这是第一步。从数据集中下载您的内容集，在学习中心进行一些分析。所以从这里。

01:53:41
The homepage of the learning center, and it's under, analyzes data sets. And you're going to want data set six. You then go to the Analyze tab up here, and that is where you add your Ngrams tool and your swamp.
学习中心的主页，在下面，分析数据集。你需要数据集6。然后转到这里的Analyze选项卡，这就是添加Ngrams工具和沼泽的地方。

01:53:54
And what I'm going to ask you to do is review what comes out of the talk. So you're going to look at the word cloud at n grams, and you're going to look at the topic. Image.
我想让你们回顾一下这次演讲的内容。所以你要看一下n克的云这个词，你要看一下这个主题。的形象。

01:54:09
Of topic modeling, and you're going to review that, because I'm going to ask you to try and figure out whether you can make these things better, whether you can clean these things up.
主题建模，你们要复习一下，因为我要让你们试着弄清楚你是否能把这些东西做得更好，你是否能把这些东西清理干净。

01:54:19

And this is going to mean going to the cleaning tool. And that is our second bit up here in the top bar there. So we're going to click the cleaning tool and the cleaning tool.
这就意味着要用清洁工具。这是我们的第二个部分在上面的条形图中。我们要点击清理工具和清理工具。

01:54:31
Is, clearly is a really important part of any kind of data analysis, because it allows you to kind of try and remove, in this case, OCR errors, or to clean up the data to put it into a shape.
显然是任何数据分析中非常重要的一部分，因为它允许你尝试去除，在这种情况下，OCR错误，或者清理数据，把它变成一个形状。

01:54:44
That makes it good for you for this particular project. So you can do things like, you can remove the number of characters. You can move special characters in particular bits of punctuation or particular bits of punctuation. So if.
这对你这个项目很有帮助。你可以这样做，你可以删除字符的数量。您可以移动特定标点符号位或特定标点符号位中的特殊字符。所以如果。

01:55:00
If your analysis, if your visualisation has got under codeons in it, or square brackets, if you think, well, that's not telling you.
如果你的分析，如果你的可视化中有密码子，或者方括号，如果你认为，好吧，这并没有告诉你。

01:55:07
It's just noise. It's just useless noise. Get rid of them. Okay, you know, put ticks into there, and it will get rid of them. You can do find a replace So if you see the word government.
这只是噪音。只是无用的噪音。摆脱他们。好吧，你知道，把虱子放进去，它会把它们赶走的。你可以找到一个替代品，所以如果你看到政府这个词。

01:55:18

Misspelled as govern space meant. And this is just an example. I don't think this is in your one. Then you can find your place, and that will do it across all your documents, which.
拼错为“治理空间”的意思。这只是一个例子。我想这不在你的书里。然后你就能找到你的位置，这样就能在你所有的文档中找到。

01:55:28
Allows you to conduct, which is very, very, very useful. You've also got this thing called stopwords here on the left hand side. So this bit here, stopwords are just words that ignored from your analysis.
可以让你指挥，这非常非常非常有用。你在左手边也有一个叫做停顿词的东西。所以这里的停顿词就是在你的分析中被忽略的词。

01:55:40
All right. So that would be words like A and an and he and she and it, and that sort of thing, words that don't really tell you in it.
好吧。比如像A， an, he， she和it这样的词，这些词并不能真正告诉你。

01:55:51
So you might as well get rid of them. Then we have stopwords lists here that you can use there. You can add to this if you want to. So if you didn't want, I don't know the word missed it.
所以你最好把它们处理掉。然后我们这里有停词列表，你可以在那里使用。如果你想的话，还可以加进去。所以如果你不想，我不知道这个词错过了它。

01:56:02
To appear? Because what's that telling you when you could put that in there? And that would ignore that word there too.
出现?因为你可以把它放进去，这说明了什么？它也会忽略这个词。

01:56:08
Oh, there was one thing I didn't show you here when you're putting clean configuration. The thing to remember up here at the top is to click new configuration, give it a name that you're going to recognize, and then

remember to save it.
哦，有一件事我没有告诉你们当你们放干净的构型时。在上面要记住的是点击new configuration，给它一个你能识别的名字，然后记得保存它。

01:56:21
Okay, so you want to save it. So if I do this, I say that my box of Rebellion Cleaning figuration there.
好吧，你想保存它。所以如果我这样做，我说我的盒子反叛清洗图形在那里。

01:56:29
And there we go. Then I say that I want to add number characters. I want to choose a starter list that's in English there. I want to remove some punctuation. I want to be my final place of government.
好了。然后我说我想添加数字字符。我想选一份英文的开胃菜。我想去掉一些标点符号。我想成为我最后的政府所在地。

01:56:43
Here we go. Here govern space, meant instead of, oh, government is one word. And then just remember, really, really important. So I'm going to say, again.
开始吧。这里的“治理空间”的意思不是，哦，“治理”是一个词。记住，这非常非常重要。所以我要说，再说一遍。

01:56:55
Just remember, save that, okay, I'll tell you when there's unsafe changes, but save it, because then you've got box rebelling, and then what happens?
记住，保存它，当有不安全的变化时，我会告诉你，但是保存它，因为这样你就会出现反框，然后会发生什么？

01:57:04
When you want, then I'm going to ask you to apply the cleaning configuration and the way you apply the cleaning configurations when you do anything.

当你需要的时候，我会要求你应用清洗配置以及你在做任何事情时应用清洗配置的方式。

01:57:13
So in this case, when we analyze our data, so you're going to go back to analyze. So we've got that iterative thing going on here.
在这种情况下，当我们分析我们的数据时，你要回去分析。我们在这里进行了迭代。

01:57:22
Okay, go back to analyze. We're going to do a new setup for a particular tool, and you can change the setup. You can figure out what that means, or just use the default settings. That's fine, but you can also hear add a cleaning invigorate.
好，回去分析。我们将为一个特定的工具做一个新的设置，你可以改变设置。您可以弄清楚这是什么意思，或者直接使用默认设置。这很好，但你也可以听到添加一个清洁活力。

01:57:38
And you can see there's my box Rebellion one there. And then when I click, run, it's going to apply that cleaning infuriation before it runs, so it's going to apply that clean configuration to my data.
你可以看到这是我的反叛盒子。然后当我点击运行时，它会在运行前应用清理激怒，它会在数据上应用清理配置。

01:57:50
And then I run the analysis. And that is basically everything I'm going to ask you to do. I'm going to leave you.
然后进行分析。这基本上就是我要你们做的所有事情。我要离开你了。

01:57:59
To try and figure out the rest of the stuff yourself. Okay, but in order to give you a hand, this is your workshop activity.
试着自己弄清楚剩下的东西。好吧，但为了帮你一把，这是你的工作坊活动。

01:58:06
So you're going to explore your topic individually or in small groups. I want you to do a little bit reflection on your methodology. We're going to come together just to say goodbye in about 20 min.
所以你们要单独或小组探索你们的主题。我想让你们反思一下你们的方法论。我们将在20分钟后聚在一起道别。

01:58:17
But do that reflection on your own. I'm not going to ask you to share it, and then I just want you to do a little bit of consideration about how you might use this tool and these methodologies to explore your own research interests.
但你要自己反思。我不会要求你们分享它，我只是希望你们考虑一下如何使用这个工具和这些方法来探索你们自己的研究兴趣。

01:58:29
So this is our class exercise. Select data, six of the boxer up guys, and we've seen how to do that. You run ngrams and topic one.
这是我们的课堂练习。选择数据，6个拳击手，我们已经知道怎么做了。你运行ngram和主题1。

01:58:39
Then you consider ngrams. You look at the analysis, look at the visualization, what noise can you identify? Are there words or phrases or characters that you don't want?
然后再考虑gram。你看一下分析，看一下可视化，你能识别出哪些噪音？有没有你不想要的单词、短语或字符?

01:58:49
Things that aren't useful to you. Then think about, how can I get rid of those? Because that's where you're going to develop a cleaning configuration to remove some of that noise that you've identified, not just anything.
对你没用的东西。然后想想，我怎么才能摆脱这些？因为这就是你要建立一

个清洁结构来去除一些你已经识别出来的噪音，而不仅仅是任何东西。

01:59:02
The things you've identified as being noisy within your data set. You're then going to go back rerun ngrams and apply your cleaning inviberation.
在你的数据集中，你认为有噪声的东西。然后你要回去重新运行程序并应用你的清洁振动。

01:59:12
And I want you to note three key areas in your ngrams visualisation that you think might be relevant to somebody studying the boxer Edit. You know, are there words or phrases?
我想让你在你的图形可视化中注意到三个关键领域，你认为这些领域可能与研究拳击手编辑的人有关。你知道，有什么词或短语吗?

01:59:24
That up here that you think, oh, this is something that I should look at in more detail to learn more about the boxer value. And if you have time, I want you then to go over to your topic model in visualization and examine that.
在这里，你会想，哦，这是我应该更详细地研究的东西，以了解更多关于拳击手的价值。如果你们有时间，我希望你们去看一下可视化的主题模型并检查一下。

01:59:37
Okay. And one of the things that you're going to do in that first topic modeling visualization is classifying the topics. Because topic modeling is what we call a qualitative.
好吧。在第一个主题建模可视化中，你要做的一件事是对主题进行分类。因为主题建模就是我们所说的定性的。

01:59:47
Analysis. So because you have to get involved to help it make sense, which means classifying the topics by investigating them, and indeed investigating the included doctor.

分析。因为你必须参与进来，帮助它有意义，这意味着通过调查来分类主题，实际上是调查所包含的医生。

01:59:58
So that is what I'm asking you to do. This is where you go to access the lab. I've got a link there, which is tiny url dot com.
这就是我要你做的。这是进入实验室的地方。这里有个链接，url。com。

02:00:10
Former slash n US Day or Lab. I'm hoping that you've all been there already in the prework of hoping you've all set yourself up.
前斜杠n美国日或实验室。我希望你们都已经准备好了希望你们都准备好了。

02:00:19
In the lab as a main user. That's the QR code. I'm going to leave that up on the screen so that you have the.
在实验室作为主要用户。这就是二维码。我把它留在屏幕上，这样你们就有。

02:00:31
You have the instructions. Does anyone have any questions on that? Or can I just let you all get going for the next 15 min or so?
你有说明。有人对此有什么问题吗？或者我能让你们在接下来的15分钟左右的时间里继续吗?

02:00:41
No, no questions. Well, sorry. Question, no, no, I'll go. Perfect, really.
不，没有问题。嗯,抱歉。问题，不，不，我去。完美的,真的。

02:00:51
Over to you. I'll get back to you for 15 min just to run on and say thank you. But I've got any questions.
交给你了。我会花15分钟跟你说声谢谢。但我有问题要问。

02:01:05

No one needs help. This is a lot of stuff. And then you figure out, okay.
没有人需要帮助。这是很多东西。然后你就能算出来。

02:01:21
Come on, google.
加油，宝贝。

02:01:39
Yes.
是。

02:02:10
So.
所以。

02:02:11
So this is.
这是。

02:02:13
There's a lot of messy stuff.
有很多乱七八糟的东西。

02:02:43
Only me.
只有我。

02:02:51
Female.
女性。

02:02:54
No, I don't.
不，我不。

02:03:07
Check out.
退房。

02:03:07
I know.
我知道。

02:03:25
A list of.
一个列表。

02:03:52
Yes.
是。

02:04:02
Or gender. You want to look at the sponsors and all the mr and mrs. Right. So if you want.
或性别。你要看看赞助商和所有的真命天子。如果你想。

02:04:17
Um.
嗯。

02:04:27
So so something that Chris didn't mention, but it's good to know is that all the tools in there are freely available.
所以Chris没有提到的，但很高兴知道的是所有的工具都是免费的。

02:04:36
They are open source tools that other researchers have created. What Gale has done is you have put it together into one place, and you can pull out the data from the Gale subscriptions that we have as a lot.
它们是其他研究人员创建的开源工具。Gale所做的就是把这些数据放到一个

地方，你可以从Gale的订阅中提取数据我们有很多。

02:04:46
I agree. So that's what makes it easy to do it. So buoyant, spacey. All the tools that you see in there, the topic modeling tools and grand tools, they're all actually available out there. It's just that here they are, all in the same place.
我同意。这就是为什么做起来很简单。如此浮力，如此太空。你在那里看到的所有工具，主题建模工具和大型工具，它们实际上都是可用的。只是它们都在这里，都在同一个地方。

02:04:58
So you can build the data set within the lab and apply all these six different tools to it at the same time. So that's why it's helpful. They may ask a good question. You can put in your own data set.
所以你可以在实验室里建立数据集并同时应用这六种不同的工具。这就是为什么它很有用。他们可能会问一个好问题。你可以放入你自己的数据集。

02:05:09
If you have a thousand text files, you can upload it in, and then you can do an analysis together with other stuff from the GIVE databases. So all the GIVE databases are available for you.
如果你有一千个文本文件，你可以上传它，然后你可以和GIVE数据库中的其他东西一起做分析。所以所有的GIVE数据库都是可用的。

02:05:20
In the lab. So the newspapers staff, the Global AI history staff, right? The global Asian staff, the Chinese staff, the American stuff, the British newspaper stuff.
在实验室里。报社的员工，全球人工智能历史的员工，对吧？全球的亚洲员工，中国员工，美国员工，英国报纸员工。

02:05:32
That's all there. All you need to do is pull it out from the right collections, curate, build your data set, and then you can go run these operations and

analysis to Something.
都在这里。你所需要做的就是把它从正确的集合中拉出来，整理，构建你的数据集，然后你就可以运行这些操作和分析了。

02:05:40
It's pretty convenient, right? It's in one place, obviously. He suggests you that you do it there. You don't have to do it there because the twos are available elsewhere. But it's an easy way to get started.
这很方便，对吧？很明显，它在一个地方。他建议你在那里做。你不必在这里做，因为这两个在其他地方都是可用的。但这是一种简单的开始方式。

02:05:51
Right? Both on contact analysis, without having to do the installations yourselves and so forth. Okay.
对吧?都是接触分析，不需要自己安装等等。好吧。

02:05:59
All right, was that fun? No, why not? Fun?
好了，好玩吗？不，为什么不呢？有趣吗？

02:06:06
Oh, have some heartflows. So to her complex, it's always an initial hump.
哦，来点心动。所以对她的复合体来说，它总是一个初始的驼峰。

02:06:17
In terms of getting used to the system, the concepts are also not something that we always teach in history, right? Built keen analyze, right? These are terms that other disciplines use a lot more, in particular.
在适应这个系统方面，这些概念也不是我们在历史上经常教的，对吧？建立敏锐的分析，对吧？这些术语在其他学科中使用得更多。

02:06:30
You did a lot more. The topical modeling isn't loading it for me, but we haven't spoken about that interpretation yet.
你做了很多。局部建模没有为我加载它，但我们还没有谈到这个解释。

02:06:40
So generally, text analysis, you can take it in two ways, right? You can use it to explore the corpus.
一般来说，文本分析，你可以从两方面来理解？您可以使用它来探索语料库。

02:06:49
Right, and then you can use it to generate conclusions once you have cleaned it right. So E.G., topic modeling is the way of understanding the contours of the data set, what's actually in the data set.
对，然后你可以用它来得出结论一旦你清理干净了。例如，主题建模是一种理解数据集轮廓的方法，即数据集中实际存在的内容。

02:07:01
Right? So you can go, oh, it turns out maybe there's actually quite a gender dimension to it that you didn't think existed, because it's about the box of rebellion, right? And then, so this allows you to delve in a bit deeper and do the close reading Work.
对吧?所以你可能会说，哦，结果可能里面有一个你认为不存在的性别维度，因为这是关于叛逆的盒子，对吧？然后，这可以让你们深入研究，做细读作业。

02:07:14
That's really important, right? The other thing you can do is, of course, then you can start making sort of statistical comparisons. How much actually does gender surface in this?
这很重要，对吧？当然，你可以做的另一件事是，你可以开始做一些统计比较。性别到底在其中起了多大作用?

02:07:23
Right? How much does diplomacy surface in this? So you can do the N grams and use that to give you a number, like a percentage, right? That helps you quantify or describe this.
对吧?外交在其中发挥了多大作用？所以你可以用N克来得到一个数字，比如

百分比，对吧？这可以帮助你量化或描述它。

02:07:36
Collection in a different way. Sometimes that's research publication friendly, because it means that, you know, you're doing some sort of analysis that allows you to compare Apple to Apple.
以不同的方式收集。有时这对研究出版是友好的，因为这意味着，你知道，你在做某种分析，可以让你比较苹果和苹果。

02:07:47
Right? So, but it really depends on your question, right? So some people use it as exploration too. Some people use it as a way to sort of make conclusions.
对吧?但这取决于你的问题，对吧？所以有些人也把它当作探索。有些人用它来做结论。

02:07:57
About certain data, right? Especially if you put in your own data. And then you can do that comparison work between the box of rebellion, stuff that Gale has, which is very specific from a specific type of source.
关于某些数据，对吧？特别是如果你输入了自己的数据。然后你可以在叛逆的盒子之间做比较，盖尔有一些东西，这些东西来自一个特定的来源。

02:08:09
Maybe you have another corpus of box of rebellion stuff, but from a private archive. And now you can do that kind of comparison work, which would be quite interesting.
也许你有另一个关于反叛的箱子，但是来自私人档案。现在你可以做这种比较了，这很有趣。

02:08:18
Right? So you can have research conclusions that come up from there. You can have both exploration and conclusions, right? The tools are agnostic in that way, whereas a matter of how you want to clean it.
对吧?所以你可以从那里得出研究结论。你可以同时进行探索和总结，对吧?

工具在这方面是不可知的，而问题是你想如何清理它。

02:08:28
How you want to build your data set, right? How you want to cure rate, what's going on, and which tools you decide to apply and for what purpose right?
你想如何构建你的数据集？你想要的治愈率是多少，发生了什么，你决定使用哪些工具，目的是什么？

02:08:36
So you realize a lot of personal interventions in terms of what you're going to do, the data doesn't speak for itself necessarily, right? You kind of need to step in.
所以你意识到很多个人干预就你将要做的事情而言，数据不一定能说明问题，对吧？你需要介入一下。

02:08:47
And be the historian. And was it?
做一个历史学家。是吗？

02:08:50
Question in terms of like conclusion, are there, like, other types of tools?
关于结论的问题，有没有其他类型的工具？

02:08:56
You've seen of you would recommend These are the standard tools that we use in text analysis as we These are the ones that we use as historians, as researchers, because, first of all, they are.
这些是我们在文本分析中使用的标准工具这些是我们作为历史学家，研究人员使用的工具，因为，首先，它们是。

02:09:09
You don't take a lot of computational power. They are free. They're open source, and other people have used them, so they're reliable in that sense. So.

你不需要太多的计算能力。它们是免费的。它们是开源的，并且其他人已经使用过它们，所以在这个意义上它们是可靠的。所以。

02:09:18
I would say, you know, go ahead, use these tools within the lab environment to play around with them. There might be other, more specific tools. I would say, get started with these verse.
我会说，你知道，继续，在实验室环境中使用这些工具来玩它们。可能还有其他更具体的工具。我会说，从这些诗句开始。

02:09:28
And then figure out if you need something that's a bit more bespoke or different, right? That's my suggestion.
然后弄清楚你是否需要一些更定制的或不同的东西，对吧？这是我的建议。

02:09:36
Okay, any questions, thoughts before we conclude. So things like collocation, all of that.
好的，在我们结束之前有任何问题或想法。比如搭配，所有这些。

02:09:46
Concordance. So buoyant is how you will do that. Buyant. I don't know if what is called.
一致性。你要做的就是浮力。Buyant。我不知道这叫什么。

02:09:53
But there should be a components to that allows you to explore the data. Is there in the lab itself? There are six or seven tools, I think.
但是应该有一个组件来允许你探索数据。在实验室里有吗？我想有六七个工具。

02:10:05
No, yes.
不,是的。

02:10:07
So if you go to analyze, and then you click, and you add, kind of the tools that you want to use for your data set, you should be able to find. I think it's six tools.
如果你去分析，然后点击，然后添加，你想用在数据集上的工具，你应该能找到。我想是六种工具。

02:10:16
And each of them do different things. They have a different method to it, play around with them, right? Figure out, actually, what kind of conclusions they can provide for you.
每个人都做不同的事情。他们有不同的方法，和他们一起玩，对吧？实际上，弄清楚他们能给你提供什么样的结论。

02:10:27
N grams is just simple sort of frequency counting, very counting, how many words that are adding it together, so on and so forth. But topic modeling, E.G., has a different method.
N个图只是一种简单的频率计数，非常计数，有多少单词加在一起，等等。但是主题建模，例如，有一个不同的方法。

02:10:36
It gives you a different, more qualitative conclusion, right? The Learning Center will give you a guide to all the different tools, so if you want to work through them, there are worksheets and exercises there, so you can learn all the different tools and what they mean and how people use them.
它会给你一个不同的，更定性的结论，对吧？学习中心会给你一个所有不同工具的指南，所以如果你想完成它们，那里有工作表和练习，所以你可以学习所有不同的工具，以及它们的含义和人们如何使用它们。

02:10:50
They are book examples as well. So under Learning Center, I believe that's a digital showcase. You can actually see how other historians are using these tools.
它们也是书中的例子。在学习中心下面，我相信这是一个数字展示。你可以

看到其他历史学家是如何使用这些工具的。

02:10:59
To create research conclusions, right? A lot of them are master's students as well. Right? So these are all very eminently local, right? So you can copy some of the method you can inspire by how they approach it, so on and so forth.
得出研究结论，对吧？他们中的很多人也是硕士生。对吧?所以这些都是地方性的，对吧？所以你可以复制一些方法你可以从他们的方法中得到启发，等等。

02:11:12
So working tomorrow. All right, every good.
所以明天工作。好吧，一切顺利。

02:11:24
So.
所以。

02:11:24
Okay.
好吧。

02:11:27
So we started a little bit about discussing some of the ways that we approach text copper, sis, copper, and kind of where we said as to.
所以我们开始讨论一些我们处理文本的方法铜，铜，铜，还有我们说到的。

02:11:37
For instance, there, right? Godi, this is a very regular example about how and why we should be involved as humanists in the whole digital visualization process, the method.
比如这里，对吧？Godi，这是一个很常见的例子关于我们作为人文主义者如何以及为什么应该参与到整个数字可视化过程中，这个方法。

02:11:48
Creation of text corporate itself, right? And Chris gave you a sense of what it looks like for them in terms of how they design archives. So you can see at every step, there's a clear sort of human intervention.
文字公司本身的创造，对吧？Chris给大家介绍了他们是如何设计档案的。所以你可以看到每一步，都有明显的人为干预。

02:12:01
Editorial decision about which archives do we put in? What kind of text do we look at? Even if you work with a library, you don't put all their stuff in. They might only put in stuff about, say, the maritime history part.
编辑决定我们放哪些档案进去？我们看的是哪种文本？即使你在图书馆工作，你也不会把他们所有的东西都放进去。他们可能只会写航海历史之类的东西。

02:12:12
Or they might only put in the stuff about the piracy part, or they might only put in stuff about gender, so on and so forth, right? And for them, it's a business case about thinking what historians want to look at five years in the future.
或者他们可能只写关于盗版的内容，或者他们可能只写关于性别的内容，等等？对他们来说，这是一个商业案例，让他们思考未来五年历史学家想要看什么。

02:12:23
Because the flight takes a long time through the hotelization takes a long time, right? So they're very interesting how decisions are being made.
因为坐飞机要花很长时间，住酒店也要花很长时间，对吗？所以决策是如何做出的是非常有趣的。

02:12:31
And think about what happens for us as researchers. Because when things become available, it drives our interests, right? It kind of anticipates our interests as far as possible for them, but for us, right? What's available?
想想我们作为研究人员会发生什么。因为当东西变得可用时，它会推动我们

的兴趣，对吧？它尽可能地预测我们对他们的兴趣，但对我们来说，对吧？可用是什么？

02:12:45
Kind of pushes you towards looking at certain questions, at certain topics and themes, right? So that's something you need to think about because, in some ways.
会促使你去研究特定的问题，特定的话题和主题，对吧？这是你们需要思考的问题，因为在某种程度上。

02:12:54
Gale, like any other vendor, is driving the direction of research.
像其他供应商一样，Gale正在推动研究的方向。

02:13:00
Well, okay. So it's all because if it's not always a one way direction with these questions.
嗯,好吧。这都是因为这些问题并不总是单向的。

02:13:08
Okay, I hope you had a little bit of fun of experimenting is on the tools. Obviously, we didn't have enough time to do all the tools, but the resources are there, so please go have a look.
好了，我希望你们对这些工具的实验有一点乐趣。显然，我们没有足够的时间来做所有的工具，但是资源在那里，所以请去看看。

02:13:20
You're interested in developing something for your project. I know a lot of you are working tax and those you are, so have a little pay with it, the scholarship that is a good place to kind of get started, right Eventually, you may want to go out of it.
你有兴趣为你的项目开发一些东西。我知道你们很多人都在纳税，所以有一点收入，奖学金是一个很好的开始，对吧，最终，你可能想要离开它。

02:13:35

Right? But otherwise, just experimenting the tools and learning it, that's a great place to do it.
对吧?但除此之外，只是尝试这些工具并学习它，这是一个很好的地方。

02:13:40
Okay. Next week, we're going to be talking about spatial data. We're going to be looking at old maps and stuff. How do you generate the data from maps, or you draw it out from an old map.
好吧。下周，我们将讨论空间数据。我们会看一些旧地图之类的东西。如何从地图中生成数据，或者从旧地图中绘制数据。

02:13:52
How to explore the data in the concrete maps, right? So what's the process that goes into making this maps?
如何在具体的地图中挖掘数据？那么制作这些地图的过程是怎样的呢?

02:13:58
Those are the focus questions here on the syllabus, but essentially it's asking you how special data can fit within your workers. Astorian, right? How might it help you do research, right? Or talk about historical.
这些都是教学大纲中的重点问题，但本质上，它是在问你，如何将特殊数据应用到你的员工身上。Astorian ?它如何帮助你做研究，对吧？或者谈谈历史。

02:14:09
Regions in the public, and what kind of historical contribution to it's a very similar to text, right? But we're thinking about the role of the historical in sort of mediating this data, interpreting this data, creating this data.
公共区域，什么样的历史贡献与文本非常相似，对吧？但我们考虑的是历史在调解这些数据，解释这些数据，创造这些数据方面的作用。

02:14:21
And where may you stand as a story? Because I know a lot of you are also looking on spatial stuff. So.
作为一个故事，你站在哪里？因为我知道你们很多人也在研究空间方面的东

西。所以。

02:14:28
All right, so window.
好的，窗口。
